Acknowledgments

I thank the Muyu people, who generously welcomed me into their community and taught me their language. This book would not have been possible without the extraordinary patience of my teacher and friend, Yakobus “Jack” Wonam.

I especially wish to pay tribute to the six narrators featured in this book: Yakobus Wonam, Patrisius Enip, Adrianus Yamuk, Xaverius Kerenjop, Galus Kolop, and Lukas Autet. Each of them generously shared their stories and patiently sat through long recording sessions.

I would also like to thank Christian Döhler for his excellent guidance throughout the entire process of editing and publishing, as well as Sebastian Nordhoff for his unfailing technical support. Two anonymous reviewers contributed greatly to the quality of this book, and I deeply appreciate their detailed suggestions.

Part I

Background

1 Preliminaries

1.1 Introduction

Muyu is a Papuan language from the Ok branch of the Trans New Guinea family, located in the central lowlands of West Papua (Indonesia) close to the international border with Papua New Guinea (PNG). It is currently spoken by an estimated 2,000 speakers although the language is highly endangered due to its lack of transmission to a younger generation.

The area where the language is spoken is characterised by dense rain forest. People nowadays settle in around 20 villages at the rivers Kao and Muyu, which follow a north-south direction and flow into the Digul river near Tanah Merah. Whereas the inhabitants were traditionally scattered all over this swampy area, living in single houses or small hamlets, modern villages are a result of resettlement promoted by missionaries and government officials since the middle of the 20th century. Most villages are accessible via road from Tanah Merah, the major city of the Boven Digul regency, within 3 to 4 hours by motorcycle.

Muyu has at least six dialects. These are: Aree, Kawiye, Okpari, Kakaip, Kamindip, Yonggom. Dialects of Muyu vary greatly in their lexicon and sometimes in phonetic detail. Little is known, however, about morphosyntactic variation yet. In any case, speaker identities are strongly tied to the respective dialect and speakers enjoy explaining the differences to outsiders. This collection focuses exclusively on the *Kawiye* dialect spoken in the two villages Upyetetko and Kanggewot in the central Muyu area.

The Muyu language is in close contact with Wambon, an Awyu-Dumut language that is spoken at the west side of the Kao river. Marriage between Muyu and Wambon speakers have been reported from early on and continue until today. A decent command of Wambon was probably normal for many Muyu of previous generations. However, the preferred means of communication today is Indonesian, to which both languages are rapidly losing ground. While contact with Wambon is well attested, little can be said about contact with other Ok languages, such as Ngalum in the Star Mountains to the north or Ninggerum across the international border in PNG.

The remainder of this chapter is structured as follows. Section 1.2 briefly presents the Muyu language in its genealogical context, before I introduce the Muyu people in Section 1.3. Section 1.5 gives information about this collection, including the gathering and processing of the texts, before I explain some orthographic and glossing conventions in Section 1.6. The main focus will be on Section 1.7, in which the content of each text is briefly summarised. Finally, Section 1.4 offers a typological overview of the Muyu language.

1.2 Muyu and the Ok languages

Muyu (ISO *kti* for North Muyu, *kts* for South Muyu)¹ is a Papuan language of the Ok language family, which is part of the larger group of Trans-New Guinea languages (TNG). TNG spans over large parts of mainland New Guinea and is located mainly across the highlands, but also south of it. Ok lies central within the TNG area and the appertaining languages are spoken at both sides of the international border between Indonesia and Papua New Guinea.

Since Healey (1964), Ok has been subdivided into two major branches: Mountain Ok and Lowland Ok. Muyu belongs to the latter. Figure 1.1 gives a tentative family tree for Ok. Notice that Ngalum is not definitively classified yet and may either belong to one of the two branches or represent a branch on its own.² As can be seen, the Mountain Ok branch seems to be more diverse than Lowland Ok, comprising five languages: Mian, Faiwol, Tifal, Telefol and Bimin.

The Lowland Ok languages currently known are Muyu, Yonggom, and Ninggerum. However, Yonggom and Muyu seem to be two dialects of the same language (cf. Christensen 2013, also the Ninati dialect in Drabbe 1954). The linguistic landscape in the area between Muyu and Ngalum to its north is still largely unknown. The varieties spoken in this rough terrain at the foothills of the Star Mountains could either be varieties of the already known languages or turn out to be separate languages in their own right.

The Ok language family is probably not a direct descendant of TNG. Genealogical links between Ok and Oksapmin, a language spoken east of the Ok languages, have been shown by Loughnane & Fedden (2011) who propose a Greater Ok grouping. Similarly, a genealogical link with the Greater Awyu languages has

¹The glottocodes are nort2916 for North Muyu and sout2940 for South Muyu.

²At the moment of publishing this text collection, the author is working on a first description of Ngalum. His first impression is that the Ngalum structure is somewhat of a link between Mountain Ok and Lowland Ok. It seems to contain features from both branches. Of course, it is not clear yet what this means with regard to classification.

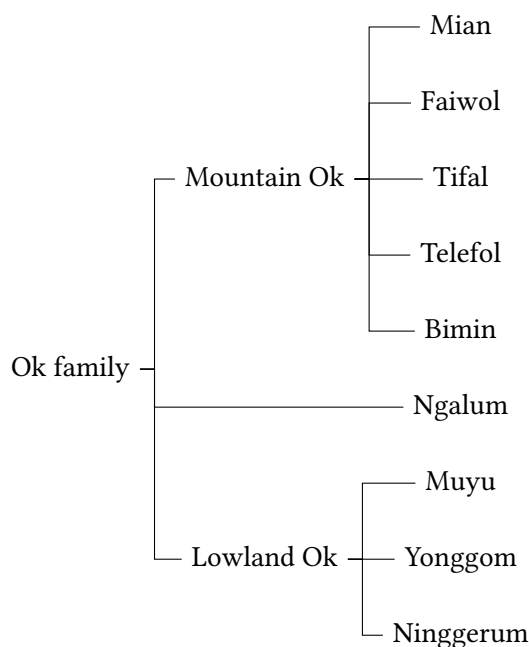

Figure 1.1: Family tree of the Ok languages

been proposed by Voorhoeve (2005). However, van den Heuvel & Fedden (2014) studied this link in more detail and explained similarities between the individual languages by language contact rather than genealogically.

1.3 The Muyu people

The Muyu people inhabit a swampy area of dense rain forest and traditionally lived from gardening. As a staple food, they eat sago, a starch that is won from the sago palm in a labor-intensive process of chopping, grating and/or pounding, and washing. Besides sago, Muyu grow bananas, sweet potatoes, and various kinds of vegetables. The diet is occasionally supplemented with meat and fish. Today the Muyu also plant some cash crops that are sold at the market in Tanah Merah, such as peanuts.

While traditional Muyu were self-sustaining gardeners, many adults nowadays move to the cities and live on a wage. Non-indigenous education is becoming increasingly important and some Muyu adolescents even attend universities in Merauke or Jayapura. The Muyu villages have electricity and most of them

have access to the internet via the 4G standard at least since 2020. Smartphones are also widespread in the villages.

A comprehensive ethnographic description of the Muyu people can be found in the book-length study of Schoorl (1957). Only some key points can be summarised here: Muyu social structure focuses on the nuclear family with the father as the head of the family. Larger social groups like lineages and clans exist but seem to have little influence on an individual's everyday life. The marriage pattern is exogamous and it is expected that a woman moves to her husband's village. Children were traditionally multilingual, speaking Muyu and at least one of the surrounding languages, but identified with the language of the father. Another important institution is the avunculate, i.e. a special bond between a male child and his maternal uncle. Land tenure in the Muyu area is tied to the individual. Gardens are inherited from the father and cultivated by members of the family. As for religion, the majority of Muyu adhere to the Roman Catholic Church. The first missionary was the Dutchman Petrus Hoeber, who began his work in the Muyu area in the middle of the 1930s and is still warmly remembered today.

1.4 Typological overview of the Muyu language

This section gives a brief summary of the findings and serves as a first orientation towards understanding the annotations in the text collection. It is a condensed version of information provided in Zahrer (2023).

1.4.1 Phonology

Muyu has a medium-sized phoneme inventory. There are 9 consonant phonemes: /b, t, k, m, n, ŋ, l, w, j/. There are no fricatives and the voicing of plosives is only allophonic variation. The liquid represented by /l/ varies from speaker to speaker between [r], [l] and [ɾ]. There are 5 vowels /a, e, i, o, u/. Vowel length is virtually not contrastive with the exception of a few minimal pairs that contrast in [a] vs. [a:]. Some verb roots contain a vowel that harmonises in quality to the vowel of the first suffix, e.g. *wɪn-i* [go-INF], *wun-un* [go-3SG.F], *wan-an-un* [go-IRR-3SG.F]. Typical syllable structures are V, VC, CV and CVC. Consonant clusters are avoided by the language. Both disyllabic and trisyllabic words outnumber monosyllabic words. Words with more than three syllables are rare and probably due to compounding. Unlike other languages of the Ok family, Muyu does not have lexical tone. Furthermore, there seems to be no lexical stress. Prosodic features take place in larger units, e.g. falling and rising intonation to signal finality or continuation in complex sentences (see Zahrer 2024).

1.4.2 Word classes

The basic distinction is between verbs and nouns. Verbs are morphologically complex and take a broad range of affixes, both for argument indexing and some aspect/mood categories. Nouns, on the other hand, are morphologically simple and mostly unmarked, with the exception of an optional plural morpheme *-a* that can be added only to kin terms. Muyu also has a class of adjectives that can be defined by their post-nominal position in the noun phrase (see below: §1.4.5). Like nouns, adjectives are not inflected. Muyu has two genders: masculine and feminine, which are mostly found at pronouns and argument indexes at the verb. However, there is no NP-internal agreement or agreement with inanimate nouns. Closed word classes are pronouns, adverbs, directionals, postpositions, quantifiers, conjunctions, interjections and particles. The pronouns distinguish number (singular vs. plural) as well as gender (masculine vs. feminine) in the second and third person singular. Contrary to other Ok languages, Muyu does not have an inclusive/exclusive distinction in the first person pronouns.

Muyu speakers make extensive use of interjections. Most interjections are simple vowels or diphthongs in combination with a peculiar movement in pitch (often a sudden rise). These elements are very frequent, since they signal the beginning of direct speech, which is ubiquitous in Muyu narratives. For example, a quoted question would be marked like this: “*Oh, where are you?*”, *he asked*. In dialogs with fastly alternating turns, each change of speaker is indicated with an interjection at the beginning of the turn.

1.4.3 Demonstratives

Demonstratives have various syntactic functions and therefore cannot be described as a single word class. Muyu comprises a rich inventory of more than thirty demonstratives, encoding such information as distance to the deictic center, elevation, visibility, etc. The basic system is binary and comprises many demonstrative pairs beginning with *e-* ‘proximal, i.e. close to the center’ and *o-* ‘neutral, i.e. not close to the center’. The deictic center can be set relative to the context but is mostly conceptualised as the current speaker. Table 1.1 lists only the simple demonstratives together with their functions and glosses. Note that for most pairs the proximal form (*e-*) has an extended gloss (e.g. ‘this’ or ‘here’) in comparison to the neutral form. Semantically, the proximal forms are more specific in Muyu (see Zahrer 2023: Ch. 5). In practice, however, the proximal/distal contrast mostly boils down to ‘this’ vs. ‘that’ in the English translations.

Typologically interesting is the existence of a demonstrative copula pair *eyen* ‘this is’ and *oyen* ‘that is’, which are found in cleft-like constructions, as well as

Table 1.1: Inventory of simple Muyu demonstratives

FORMS	FUNCTIONS	GLOSS
<i>edo / odo</i>	pronominal, adnominal, relative, identificational	DEM.this / DEM
<i>ege / ogo</i>	pronominal, adnominal relative, adjunct	DEM.here / DEM
<i>eya / oya</i>	adverbial, adnominal	here / there
<i>eyamin / oyamin</i>	adverbial	until_here / until_there
<i>éyom / oyom</i>	adnominal	COM.DEM.this / COM.DEM
<i>eyóm</i>	adverbial	in_here
<i>eyot / oyot</i>	adnominal	CONTR.DEM.this / CONTR.DEM
<i>eyot / oyot</i>	conjunctive	CAUS.DEM.this / CAUS.DEM
<i>eyen~iyen / oyen</i>	copula	this_is, here_is / that_is, there_is
<i>embet / ombet</i>	oblique	OBL.DEM.this / OBL.DEM
<i>eye~iye / oye</i>	adnominal	POSS.DEM.this / POSS.DEM
<i>ekuni / okuni</i>	predicate	like_this / like_that

the demonstrative verb pair *ekuni* ‘do/be like this’ and *okuni* ‘do/be like that’, which are highly frequent and work as a coherence device to link actual and previous discourse.

1.4.4 Verbal morphology

As was stated earlier, verbs are morphologically complex. They are comprised of a root and one or several affixes. Verb roots pertain to three different conjugation classes (*e*-, *o*-, and *a*-conjugation) that vary in inflectional properties and combinability with other morphemes. Virtually all affixes are suffixes, with the exception of one paradigm of object prefixes. Muyu has an interesting phenomenon that is found in many languages of the TNG family: While subject indexes are obligatory on all clause final verbs, object indexing is confined to only

a handful of verbs. There are both, object prefixes and object suffixes, depending on the lexical item. One peculiarity is the verb for the meaning ‘hit/kill’. It does not have a formal verb root but fuses object prefix with subject suffix and potential other suffixes. To gloss the meaning ‘hit/kill’, I segmented a zero morpheme ($\emptyset$) in all occurrences of this verb. Besides argument indexing, we find bound morphemes for durative and perfective aspect, irrealis mood, and switch reference marking (see below: §1.4.9). Aspect is generally less salient a feature than in languages from the Mountain Ok branch (Healey 1964). Irrealis mood denotes various meanings, among which the most important are: future events, possibility, ability, desired events, prohibited actions and habitual/ritualised events. In contrast to the morphologically marked categories mentioned above, some aspect/mood categories are formed periphrastically (see below: §1.4.8).

1.4.5 Noun phrase syntax and postpositional phrases

The Muyu NP can be described as having several slots, consisting minimally in a head noun or pronoun. Although there is a pre-head slot that is reserved for possessors and prenominal relative clauses, most noun phrases begin with their head, typically a noun. If further elements are present, we find the following order: noun $\rightarrow$ adjective $\rightarrow$ numeral/quantifier $\rightarrow$ demonstrative. Relative clauses can be either prenominal or postnominal. Their morphosyntactic marking of relative clauses varies with their position (prenominal RCs have a linker *ye*, whereas postnominal RCs have a demonstrative after their verb). Muyu does not have articles but some adnominal demonstratives seem to help indicating specificity/definiteness of a referent when needed. Noun phrases can be coordinated with the conjunction *yom* (e.g. *ne yom Paul yom* ‘I and Paul’) which also serves as comitative marker (e.g. *ne, Paul yom* ‘I, together with Paul’). Disjunctive coordination of noun phrases (“X or Y”) is not possible in Muyu. Muyu postpositional phrases consist of a postposition and an NP as its complement. They are mostly used to denote spatial relations: *adimbon yimin* ‘on the bridge’, *meja tap* ‘under the table’, *manggo kobi* ‘on the Manggo tree’. Muyu shows a syntactic similarity regarding postpositional phrases. When the NP inside the phrase is determined by a demonstrative, the NP is discontinuous and order becomes: noun $\rightarrow$ postposition $\rightarrow$ demonstrative, as in *kudu tap eyani* [car under down.here] ‘under this car’. This seems to be a residue from the nominal origin of Muyu postpositions.

1.4.6 Clause syntax

The common order in intransitive clauses is SV, while transitive clauses have mostly AOV order. Objects can be shifted to clause-initial position though. Muyu

1 Preliminaries

clearly prefers a maximum of one overt argument, which means that subjects are often not expressed overtly in transitive clauses. Ditransitive clauses are rare in Muyu. The only clear cases are found with the verb *ka-* ‘give’, which indexes the receiver via suffix. However, three overt noun phrases in a Muyu clause are highly exceptional and only found in elicitational data. An important feature of Muyu is the marking of oblique arguments with *=bet*. This clitic has many different functions. An oblique argument can denote: locations, goals of movements, sources of movements, instruments, temporal adjuncts, partitives and agentive subjects (a.k.a. optional ergative). An overview with example phrases is given in Table 1.2.

Table 1.2: Functions of obliques marked with *=bet*.

FUNCTION	EXAMPLE	TRANSLATION
Location	<i>Kanggewot=bet</i>	‘in Kanggewot’
Goal of movement	<i>ok Inggo kaba=bet</i>	‘to the estuary of the river Inggo’
Source of movement	<i>ambip=bet</i>	‘from the house’
Instrument	<i>alung=bet</i>	‘with a crowbar’
Temporal	<i>adon alop mim=bet</i>	‘at three o’clock’
Partitive	<i>om=bet</i>	‘from the sago’
Agentive subject	<i>adi=bet</i>	‘it was father who ...’

Non-verbal clauses can have an optional copula clitic *=an* or the demonstrative copula (*eyen* ‘this is’ / *oyen* ‘that is’). If aspect or mood marking is required, the copula is replaced with the light verb *keli* ‘become’. Existential clauses make use of an existential particle *aip* or *yanop*. As for negation, the clause final negation particle *balin* is immediately succeeding the verb.

1.4.7 Verbal number

A typologically interesting feature is the alternation of verb stems depending on participant number (subject or object) as well as event number. Muyu comprises more than thirty verb pairs that take part in the verbal number system. Here are two examples:

- (1) *Yum kane kemun.*
 yum kan-e kem-un
 banana take:SG.O-SM do-3SG.F
 ‘She used to take a banana.’
- (2) *Yum be kemun.*
 yum b-e kem-un
 banana take:PL.O-SM do-3SG.F
 ‘She used to take (several) bananas.’

As can be seen from (1) and (2), the choice of verb stem selects for the intended number value of the object argument. Similar pairs determine subject number (*koke-* ‘one X falls’ vs. *kombil-* ‘many X fall’) and event number (*bane-* ‘call once’ vs. *yongga-* ‘call several times’). Details on this phenomenon can be found in Chapter 8 of Zahrer (2023).

1.4.8 Complex predicates

Predicates that consist of more than one lexical element are abundant. There are three types: (a) light verb constructions have a nominal main element preceding a semantically impoverished light verb as in (3), (b) multi-verb constructions combine two or more verbs which contribute equally to the overall meaning of the predicate, such as the caused accompanied motion construction in (4), (c) auxiliary verb constructions combine a main verb and an auxiliary to denote certain aspect/mood categories periphrastically, such as the desiderative construction in (5). As can be seen from the latter two the examples, only the final verbs are fully inflected, whereas non-final verbs take a generic suffix *-e* ‘SM, i.e. serial marker’.

- (3) *Kep olok tain.*
 kep olok ta-in
 2SG.M longing LV-1SG
 ‘I miss you.’
- (4) *Yum be minip.*
 yum b-e min-ip
 banana take:PL.O-SM come-2/3PL
 ‘They brought some bananas.’

1 Preliminaries

- (5) *Yum kanane kemun.*
yum kan-an-e kem-un
banana take:SG.O-IRR-SM do-3SG.F
'She wants to take a banana.'

As for the auxiliary constructions, Muyu expresses the following aspect/mood categories periphrastically: continuative, habitual, inchoative, desiderative and completive. The topic of complex predicates in Muyu is quite extensive. The interested reader is referred to Chapters 10 and 11 in Zahrer (2023).

1.4.9 Clause chaining and switch reference

Muyu discourse is often structured in complex chains of clauses which together form a complex sentence. When a clause takes part in such a chain, only the final clause can bear the full verb morphology, whereas all others have *medial verb forms*. Medial verbs are marked for switch reference, i.e. they bear markers for whether the next clause has a coreferential subject argument or not. Same subjects are marked with *-n* [ss] or *-gVl* [ss.SEQ]³, whereas different subjects are marked with the clitic *=e* [DS.SEQ].⁴ For two basic examples, see (6) and (7). There are further optional clitics and conjunctions that can be added and the topic as a whole is rather complex. The interested reader is referred to Chapter 12 in Zahrer (2023).

- (6) *Be kane menone, menggamben.*
b-e kan-e meno-n-e mengga-mb-en
take:PL.O-SM take:SG.O-SM come-ss-3SG.M cook_on_leaf_oven-PL-3SG
'[Having caught many fish that day] he collected, brought, and cooked them.'
- (7) *Kaduk kawene wibe, taun.*
kaduk kawen-e w-Ø-ip=e ta-un
man climb-SM 3SG.F-hit-2/3PL=DS.SEQ die-3SG.F
'[While the husband was out hunting] people came up (to the house) and beat her and then she died.'

³The symbol V indicates that the vowel of this morpheme harmonises in vowel quality with the vowel of the subsequent suffix.

⁴The gloss SEQ indicates that in addition to subject continuity, temporal sequentiality can be marked as well. The presence of SEQ means that the events denoted by the clauses occur one after another, whereas the absence of SEQ means that there can be a temporal overlap.

1.4.10 Tail-head linkage and anaphoric verbs

The discourse strategy commonly known as tail-head linkage is ubiquitous in monological texts from Muyu. In Muyu, two sentences can be linked by repetition. A final part of a sentence (the “tail”) is repeated at the beginning of a new sentence (the “head”), as seen in (8).⁵ This is mainly used to enhance continuity between two larger discourse units, often chains of clauses (see above). Morphosyntactical marking between tail and head often differs, since they are both embedded in different syntactic contexts, i.e. often a final verb in the tail and a medial verb in the head. The size of the repeated unit varies, ranging from single words to verbatim repetition of whole clauses.

- (8) *Apyop odo kane kulubun. **Kulubenu** ...*
 apyop odo kan-e kulub-un kulube-n-u (...)
 fruit DEM take:SG.O-SM show-3SG.F show-SS-3SG.F
 ‘She took the fruit and showed it. She showed it and then she...’

A similar strategy to link discourse units consists in the use of demonstrative verbs *ekuni* ‘do/be like this’ and *okuni* ‘do/be like that’ as well as the less frequent pair *ekemi* ‘do this’ and *okemi* ‘do that’. The following example is from the text about the Benem rat (Text I, lines 23-24).

- (9) *amun wagolet tien. **Okune** tien go, ena edo tinggi ap ulukap ketma bet yile mene,*
 amun wa-gol-e =t ti-en okun-e
 nest make_nest-SS.SEQ-3SG.M =and_then.SS stay-3SG.M like_that-SM
 ti-en =go ena edo tinggi ap ulukap ketma =bet
 stay-3SG.M =PTC mother DEM.this hand tree aerial_root side =OBL
 yil-e men-e
 reach_out-SM come-SM
 ‘it made a nest and stayed there. It stayed like that, so mom put her hand in the aerial root from one side...’

The first verb of the second sentence in (9) refers anaphorically back to the previous clause predicate, thereby linking the two clause chains.

⁵Here I adopt the convention that the first part of the linkage is underlined, while the second part is bold.

1.4.11 The clitic particle =*ko*

This particle deserves separate clarification since it is abundant in all Muyu speech. Unfortunately, its functions are so diverse that I did not come up with a transparent gloss yet. The texts simply gloss =*ko* as ‘ptc, i.e. particle’. So the following notes should make it more transparent. Basically, =*ko* has a syntactic function to signal the end of a syntactic unit. At the same time, it has an information structural function to indicate that discourse still continues. The combination of these two functions causes different pragmatic effects, depending on context and the nature of the clitic’s host. For example, between two clauses it can serve as a simple clause coordinator, while at the end of an uncontinued sentence, it usually turns a statement to a yes-no question similar to English tag-questions (‘... right?’). Attached to noun phrases it serves to mark the phrase boundary which can be very useful in disambiguation, e.g. *kep tana* ‘your child / you are a child’ (ambiguous) vs. *kep ko tana* ‘You are a child’ (unambiguous). In contrast to unmarked NPs, those marked with =*ko* tend to have definite reference more often, e.g. *om anem* ‘Let’s eat sago’ vs. *om ko anem* ‘Let’s eat the sago’ (a specific amount). At the beginning of a sentence and in combination with a prosodic break, =*ko* often marks topicalisation. Between verbs in complex predicates, =*ko* serves to mark boundaries between two juxtaposed VPs, which has ramifications on event structure.⁶ Finally, *ko* can also occur as a free form and serve as a discourse marker when speakers wish to change the topic (like ‘okay, enough, let’s move on’). Probably derived from this function is the use of a free standing *ko* as a repair strategy for wrongly assigned switch reference in clause chaining.⁷ For examples of all these functions and further explanation, the reader is referred to Zahrer (2023).

1.5 About this collection

This collection is a special edition of texts that were recorded and transcribed in the course of a larger documentation project funded by the Endangered Languages Documentation Programme.⁸ The full corpus was collected during 13 months of fieldwork in the years 2019-2024 and is fully accessible at the Endangered Languages Archive (Zahrer 2019).⁹ In addition to the corpus, the project

⁶Two VPs can be modified with adverbs separately.

⁷For example, if the speaker uses a same subject marker but then plans a clause with a different subject, he can repair the chain by closing it with *ko* and resume with the other subject.

⁸ELDP grant ID: IGS0367

⁹ELAR, available at: <https://www.elararchive.org/dk0601/>

resulted in a comprehensive grammatical description of the Muyu language (Zahrer 2023).

The collection represents a subcorpus of 10 monological narratives that were specially edited for the tenets and goals of Open Text Collections. Each text is outlined in Section 1.7 below. They were selected by three guiding principles: First, they should be clustered around a common topic. Two thematic groups were established by comparing the available texts: myths of origin and stories of animal encounters.¹⁰ Second, English translations should be available.¹¹ Third, the texts should have a reasonable length. All in all, this left me with the 10 texts presented in this volume. An unfortunate consequence is that there is no gender balance in the collection. All speakers are male, which also reflects the gender imbalance in the archived material.¹² The following two subsections summarise the general workflow and some details of the editing process for OTC.

1.5.1 The general workflow

Prior to publication, the texts were mainly used as primary data for grammatical and lexical analyses. Transcriptions and translations, as well as grammatical annotations were made entirely within ELAN. All annotations were done manually. However, these original ELAN files were rarely considered as full texts with a continuous story line from beginning to end, leading to occasional inconsistencies within one and the same file. Therefore, they had to undergo intensive editing for the publication in this collection. Thus the edition of the texts can be split into two phases, the pre-OTC phase and the OTC phase. The whole process is outlined in Figure 1.2. The two subsequent phases shall be discussed in turn.

For each text, the pre-OTC phase of editing began at recording. Each narrative was recorded on video with a Canon XA40 camera and a lavalier microphone attached to the speaker's shirt. The recording was then segmented in ELAN, and transcribed and translated into English or Indonesian. The goal at that time was to produce translations that were closer to the original text instead of offering perfect idiomatic translations. In this way, grammatical analysis could be facilitated. All this work was performed while in the field. The next step included the

¹⁰In addition, the archived corpus contains procedural texts about horticulture, personal biographies, stimulus based speech, personal memories, reflections on life in the village, and much more.

¹¹At the time of this publications, not all texts in the archive are translated. Furthermore, many texts have exclusively Indonesian translations which are generally more accessible to the community.

¹²During my fieldtrips women were generally much more reluctant to be recorded, for reasons yet unclear to me.

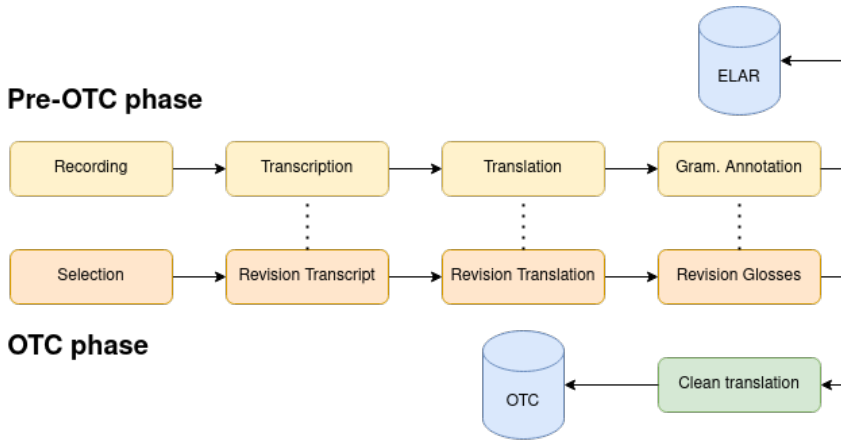

Figure 1.2: Outline of the editing process in two phases.

grammatical annotation of each recording, which was done over the course of several months parallel to the grammatical analysis of the collected material. In this phase, mistakes in the transcripts and translations were corrected. Additionally, the segmentation was completely revised, since now the emerging grammatical analysis would give insights about clause and sentence boundaries. The final phase of the documentation project was devoted to writing the PhD thesis in Zahrer (2023). During that time, many transcripts, translations and glosses were revised, especially for parts that were used as examples in the grammar. This resulted in a corpus of very heterogenous quality and thus posed a challenge for the OTC phase of editing.

The OTC phase began as soon as I decided to submit a contribution to the Open Text Collections. Since the recordings had not been edited with publication in mind, this phase required serious effort. First, I needed to select texts that were both interesting to the prospective readers and of such quality that the editing effort remained manageable. The result was a collection of 10 texts from two broad topics: mythological narratives and stories about animal encounters. Second, each text had to undergo editing of the transcript, translation, and the glosses. Finally, a running parallel text was prepared such that for each text the original text and a more idiomatic translation could be presented side by side (in the ‘Parallel text’ subsections of the individual chapters).

1.5.2 Editing efforts

The **transcript** needed editing in several ways. The orthography was not consistent through all texts, most importantly the separation of words needed harmonisation. Then typographic symbols were carefully revised. In the original files, a comma represents a prosodic break while a full stop signals finality (roughly: falling pitch and discontinuation). However, these were only guiding principles and not strictly exercised throughout the corpus. For the purposes of the OTC edition, punctuation needed to be handled more strictly. In addition to comma and full stop, question marks are used, as well as quotation marks. Quoted speech is a frequent phenomenon in all texts I have encountered so far. Not only do Muyu speakers frequently quote speech from others, the language itself requires quotative constructions for certain grammatical functions, such as desiderative modality.¹³ This revision was done in the ELAN files. This collection itself has two differing ways of handling punctuation. The full punctuation is visible in the parallel text sections that were prepared to guarantee readability. However, commas and full stops were removed from the interlinearised texts to follow best practices in linguistic annotation.

Another major issue was phenomena like production errors, slips of the tongue, mispronunciations, false starts, unnecessary repetitions, and the like. As is typical for spontaneous speech, the Muyu corpus is full of imperfect language production. In the editing process, such elements illustrate the sometimes conflicting goals between a linguistic corpus and an edited text collection. A full linguistic transcript needs to include all speech that was produced, regardless of acceptability, grammaticality, or similar aspects. However, the requirement for OTC was different, since the final result should consist of easily readable texts. Thus, I cleaned the texts from instances that were clearly identified as faulty production. Many of the existing repair sequences had already been identified and marked in the original translations. Another problem was the production errors that went unrecognized by the speakers themselves. For example, the occasional use of an incorrect subject index. Such cases were identified and commented upon by my language consultants in a separate note tier in the original files. In this collection, I simply replaced the erroneous elements in the transcript. The whole cleanup process was performed as carefully as possible. A decision was often not easy and if in doubt, I opted to leave the element in question unaltered in the transcript.

¹³For example, instead of ‘He wanted to go hunting’ a Muyu speaker would often say something like ‘Let me go hunting, he said.’

The final issue of the transcript has to do with phonological processes and phonetic production. Muyu speakers tend to elide certain phonemes in fast speech. For example, *tana edo* ‘this child’ is often pronounced as [ta.na.dɔ]. In the original files, elided sounds are represented but the corresponding graphemes are put in parentheses: *tana (e)do*. This way, the reader can identify the original element and has information about the actual pronunciation at the same time. However, information about pronunciation seemed less important for this collection and thus I removed all such parentheses, transcribing *tana edo* in the OTC. As a consequence, the orthographic transcript represents words in their full forms, as if the speaker would use careful speech all the time.

The **translation** was edited to represent less the ductus of the original text and more idiomatic English instead. While a stronger similarity with the Muyu text facilitated the structural analysis of individual examples, many translations seemed inappropriate in the broader context of this collection. One serious challenge was the different word order between Muyu and English. When a Muyu sentence stretched over multiple segments, the verb would come only at the end. Verbs were occasionally moved to earlier segments if this increased the readability of the English translation. Another issue was that arguments are often left implicit in Muyu clauses. Since English mostly requires an overt NP where Muyu does not, additional NPs were added in the translations – mostly in the form of short pronouns, e.g. *Tem-an* [see-1SG] ‘I saw it’. If the respective referent has not been mentioned for a while, a full NP was used instead to remind the reader of the referent. In this case, the supplemented NP was set in parentheses, e.g. *Tem-an* [see-1SG] ‘I saw (**the fish**)’. Finally, some subject pronouns in the translation were set in parentheses if there was neither an argument index nor a free pronoun in the Muyu original. This can happen in long chains of multi-verb constructions, where the subject is mostly retrieved from context. The parentheses reminds the reader that there is no corresponding morpheme in the original text, e.g. *tem-e...* [see-SM] ‘(**I**) saw it and...’.

As for the **glosses**, the texts were far from fully glossed. On the one hand, there were missing values, for example when a certain lexeme was not identified yet.¹⁴ On the other hand, the existing glosses were not all up-to-date considering the latest analyses and insights. Therefore, all glosses needed thorough revision. Missing glosses were filled with the help of the native speaker Yakobus Woman who was available for remote fieldwork sessions via Messenger.

¹⁴In contrast to yet unidentified lexical morphemes, grammatical morphemes were rarely an issue, since the grammatical description has gotten considerable attention in the pre-OTC phase. However, in some rare cases, I could not make sense of a certain bound morpheme in the particular context. Such morphemes were glossed with ‘?’.

Glossing conventions also needed slight adaptation. For example, glosses with multiple English words used a dot as connective (e.g. ‘carry.on.shoulder’). The OTC version uses underscores instead (e.g. ‘carry_on_shoulder’). This way, lexical meanings can be easily distinguished from glosses with multiple grammatical meanings (e.g. ‘3SG.M’).

The final step of the OTC phase was to prepare the **running parallel text and translation** that could be presented separated from the glossed original texts. As it turned out, this required further editing on both parts, the transcripts and the translations. The transcripts were stripped of punctuation as explained above. The translations were further condensed to more idiomatic English. The requirements for literal translation were less restricting here, since there are no matching glosses that guide choices in the translations. For example, tail-head linkage (see Section 1.4) was mostly reduced and repetitions that did not suit the duc-tus of English were removed. Similarly, many clauses are linked with anaphoric verbs that originally translated to ‘He/She/They did like that and then...’. Such instances were paraphrased to more English-sounding constructions such as ‘After doing that...’. Furthermore, many cases where Muyu relies on quotative structures were paraphrased in the running translation. For example, an agreement originally stated as “‘Yes”, they said’ was simply rendered ‘They agreed’. Next I removed all parentheses from the translations (see above) and represented all arguments overtly. Cumbersome descriptions and insertions were also cleaned. For example, a passage originally stating ‘So, the wives, the two women, yes the wife, since there were two women, they made the sago’ was simply paraphrased as ‘So his two wives made the sago’. Finally, I removed many interjections which did not seem necessary for a running translation.

The editing of the running parallel text introduced an unexpected problem. The original ELAN files contained continuous speech. The interlinearised text could just follow this flow and present line after line. In contrast, an edited written text needed segmentation into paragraphs. This required editorial choices, since there are no clear cut-off points in oral speech that would naturally translate to written paragraphs. I tried to organise each text into paragraphs depending on the content and set breaks according to indicators such as change of location, change of main participants etc. However, it is important to recognise that this is a purely subjective result for which I took the English translation as a basis. In no way should the paragraph breaks be related to any kind of structure in the recorded original speech.

1.6 Orthography and glossing

This section deals with orthographic symbols in the transcriptions (Section 1.6.1) and some important conventions for the glossing tier (Section 1.6.2). Abbreviations used in the glosses are listed in a separate section in the frontmatter.

1.6.1 Orthographic representation

Muyu is an endangered language and rarely written by the language community. Occasional social media posts suggest that Muyu speakers tend to apply their orthographic knowledge from school where they are educated in Indonesian. It was therefore necessary to devise a Muyu orthography for the documentation project. This orthography is also used in the OTC collection.

The orthographic representation in the transcripts is straightforward. Table 1.3 lists all graphemes and their underlying phones as well as example words that contain the respective symbol.

Table 1.3: Orthographic representations of the sounds.

GRAPHEME	PHONE	EXAMPLE WORDS
<a>	[a]	<i>ambip</i> ‘house’, <i>am</i> ‘rain’
<e>	[ɛ]	<i>ep</i> ‘puddle’, <i>et</i> ‘eight’
<i>	[i]	<i>it</i> ‘theft’, <i>ine</i> ‘tomorrow’
<o>	[ɔ]	<i>otbop</i> ‘language’, <i>on</i> ‘bird’
<u>	[u]	<i>up</i> ‘wind’, <i>umkan</i> ‘blood’
<p>	[p]	<i>otbop</i> ‘language’
	[b]	<i>bon</i> ‘place’, <i>ben</i> ‘hand’
<t>	[t]	<i>temi</i> ‘to see’, <i>tim</i> ‘louse’
<d>	[d]	<i>dim</i> ‘smoke’, <i>dip</i> ‘kind of bird’
<k>	[k]	<i>kun</i> ‘heavy’, <i>kabak</i> ‘ax’
<m>	[m]	<i>mom</i> ‘uncle’, <i>mini</i> ‘to come’
<n>	[n]	<i>nin</i> ‘snake’, <i>nong</i> ‘string’
<ng>	[ŋ]	<i>nong</i> ‘string’,
<g>	[g], [ɣ]	<i>kumugap</i> ‘moist’, <i>alalugop</i> ‘song’
<l>	[l], [r], [ɾ]	<i>talep</i> ‘big’, <i>belon</i> ‘small’
<w>	[w]	<i>wini</i> ‘egg’, <i>kowot</i> ‘wall’
<y>	[j]	<i>yongbon</i> ‘garden’, <i>ye</i> ‘he’

In addition to the symbols listed in Table 1.3, the transcripts also contain <h>. This grapheme is used together with vowel graphemes to signal an interjection, e.g. *ih!* or *ah!* are long vocalic interjections. The <h> does not correspond to any phoneme.

Common words are mostly written in lower-case letters. In contrast, upper-case letters were used for proper nouns, such as human proper names (e.g. *Bruno*), names of villages (e.g. *Awin*) or rivers (e.g. *Kowo*), and also for the name of species of animals and plants (e.g. *Yom* = a kind of bat, *Kimit* = a kind of palm tree).¹⁵ Additionally, upper-case letters also indicate the start of a new sentence after a full stop in the parallel texts.

Punctuation in the parallel texts roughly represents prosodic breaks in speech intonation. A comma indicates a break with non-final intonation, i.e. either rising or level pitch, whereas a full stop indicates a break with final intonation, i.e. falling pitch. Such breaks can be followed by a silence, i.e. a pause, or emerge as sudden pitch jumps in faster speech. The interlinearised texts do not contain such symbols.

Quotations and direct speech are always set between double quotations marks, both in the transcription line and the translation line. Each line in the glossed examples has its own quotation marks, even if it is part of a longer direct speech spanning over multiple lines.

The orthography also captures some morphonological processes like intervocalic lenition. For example, the onset of *=ket* is softened in intervocalic position and therefore transcribed as *=get*. However, this is not applied to lexical morphemes since they should be clearly identifiable in all contexts, e.g. the final consonant of *tip* becomes [w] in *tip=an* 'It is good' but remains [p] in *tip kem-ip* 'You did well'. Both cases are transcribed as *tip*.

1.6.2 Glossing conventions

Lexical units are segmented at morpheme breaks and glosses are offered in a separate tier for each morpheme. I largely follow the Leipzig glossing rules. Lexical meanings are glossed with corresponding English approximations, while grammatical meanings are glossed with the symbols and abbreviations listed in the frontmatter. Proper nouns (e.g. names of humans, rivers or villages) are simply glossed with 'PN'.

¹⁵Species were not further identified in this text collection. Since the documentation of Muyu did not focus on botanical and zoological knowledge, the author did not attempt any amateurish classification with Latin terms.

1 Preliminaries

If the lexical meaning of a morpheme cannot be glossed by a single English word, several words are concatenated with underscores. For example, *tanggal-* is glossed ‘put_tongue_out’.

Morphemes that convey several grammatical meanings (i.e. portmanteaus) are glossed in such a way that symbols for all grammatical meanings are concatenated with dots. For example, *-gol* is glossed ‘ss.SEQ’ (i.e. same subject and sequential time order). Additionally, dots are used to specify the function of an auxiliary verb, i.e. AUX.CONT for an auxiliary that forms a continuative.

Morphemes that combine lexical and grammatical meaning are glossed in such a way that the two types of glosses are concatenated with a colon. Lexical glosses precede grammatical glosses. Within each type, the regular concatenation symbols (underscores or dots) are used. This is especially important for the feature of verbal number, where the verb stem encodes information about the number of participants or event. For example, *kan-* is glossed ‘take:SG.O’ (i.e. lexical meaning ‘take’ and the grammatical meaning selecting for ‘singular objects’) or *yongga-* ‘call:several_times’ (i.e. lexical meaning ‘call’ and the grammatical meaning of multiple events).

The recordings contain many instances of code mixing between Muyu and Indonesian. Indonesian words are glossed with the extension ‘(BI)’ (i.e. Bahasa Indonesia) added to the lexical meaning. For example, Indonesian *kelapa* is glossed as ‘coconut(BI)’

Multi-word expressions sometimes have idiomatic meanings. If the meaning of individual elements is no longer transparent or the overall meaning is too far removed from a hypothetical compositional meaning, I glossed each element with the meaning of the whole. For example:

- (10) *bane walon*
ban-e wal-on
prepare-SM prepare-3SG.M
‘He prepared it.’

Although the individual words in (10) exist, no individual meaning seems to fit the multi-word expression.¹⁶

¹⁶The stem *ban-* can mean either ‘call someone’, ‘open something’, ‘grow (fungus)’ or ‘take a part of something’. The stem *wal-* regularly means ‘to stop, end’.

1.7 Outlines of the texts

The texts presented here can be divided into two thematic clusters. First we have texts that are myths about the origin of some natural entity, such as a certain kinds of animals, trees or even the moon (Texts A-E). The second cluster revolves around animal encounters, such as hunting, fishing or the occasional catching of mice (Texts F-J). The outlines in this section are of medium length. For an even more concise overview, each text begins with a brief summary at the start of the respective chapter.

Text A: The origin of the moon

This story tells how the moon came into being, involving a woman and her brother who went to the forest to make sago. Over several days, they felled sago trees, prepared the sago, and ate it. Tired of only eating sago, the brother decided to catch fish using a bow and arrow. He cooked the fish and saved some for his sister, but she insisted they wait for her husband before eating the sago. The brother thought they should eat the sago with the fish since they were in the forest to find sago.

Despite her objection, he continued to hunt fish and cook them with sago pulp, but he wasn't happy. He devised a plan involving thorns, bees, and rough objects, which he wrapped into a large package and hung from a tree. He tricked his sister into standing under it, pretending there was a bird's nest he would drop. When she stood in the right spot, he dropped the package, which hurt her.

He then stuck out his tongue, making the moon come closer, and climbed onto it, becoming the moon. His sister, realizing what had happened, cried and missed him. When her husband returned, she told him the whole story. In his grief and anger, he killed her with a stone adze, cutting her into two halves, which became a beetle and a spider.

The spider's nest is an imitation of a bird's nest, reflecting her fate. The beetle comes out when the moon rises, making a sound. The husband transformed into a Kookaburra bird, crying out when the moon rises, signaling the arrival of his brother-in-law, the moon.

This ancestral story explains how the moon came to be and why certain creatures behave the way they do, highlighting themes of familial conflict and transformation.

Text B: The origin of the coconut

This story narrates the origin of the coconut tree, beginning with a young man and his wife who lived in a house with many dogs. The man hunted pigs with the help of his dogs, who would catch and kill the pigs while he brought them back to cook and eat with his wife. The dogs, however, were only given the bones, which they began to resent, feeling they deserved more for their efforts.

One day, the man went hunting but did not return. The dogs came back alone, leading the wife to worry and search for him the next day. She discovered that the dogs had eaten him and thrown his head into the river. Devastated, she cleaned three palm tree ribs and fashioned them into a tool to retrieve his head from the river. She succeeded in retrieving it and buried it next to their house.

In time, a plant resembling a palm tree sprouted from the burial site. As it grew, the woman realized it was not a palm tree but a coconut tree. The tree flourished, producing leaves and fruit. One morning, she heard the sound “Bian-Bian-Bian” and saw a wild chicken perched on the tree. She took some seeds from the coconut tree and planted them by the Bian River, fencing the area to protect them. The tree bore many fruits, which eventually fell into the river and floated downstream.

People living downstream discovered the coconuts, took them, and planted them. The coconut trees spread widely, and people learned to pierce the coconuts to drink the water inside, a practice called *yopke* in the Komoyan subdialect and *ok anem* in the subdialect of the narrator. This story, often told by the narrator’s mother, explains how coconuts were discovered and spread, and it reflects the customs and language of their ancestors.

Text C: The origin of the bat

This story recounts the origin of bats and their connection to sago. It begins with a man and his wife, whose brother had cut down a sago tree for them before leaving for the Awin region. The couple remained behind, often making sago and hoarding it, refusing to share with others. This selfish behavior led to the frustration of their sons.

The four brothers, tired of not getting any sago, decided to transform into bats. They gathered materials like Genemon sticks and taro bars, using them to create bat-like structures with wings, claws, and other features. The eldest brother became a Yom bat, another became a Kudumbop bat, another a Dimin bat, and the last a Tinggulut bat.

They practiced flying and perfected their bat forms. One evening, they hung themselves from the rafters of their house, staying silent and still. When their

parents returned and found the sago in disarray, they were furious. As the children revealed their bat forms, they flew out of the house. The parents tried to stop them but only managed to injure the Kudumbop bat, giving it a lean waist.

The story goes on to explain the different types of bats: the Kudumbop bat makes a “wauk-wauk” sound, the Dimin bat makes a “peet-peet” sound, and the Tinggulut bat is small and often seen flying around in the evening. The transformation into bats was a result of the children’s frustration with their parents’ selfishness regarding the sago.

The narrative also includes a cautionary aspect about not eating sago before hunting bats, as it is believed to bring bad luck and make the bats fly away. In the modern era, hunting bats has become easier with foreign guns, but the traditional belief and practices still hold significance.

The story, passed down from ancestors, is a reminder of the importance of sharing and the cultural beliefs surrounding hunting and sago. It highlights the connection between human actions and the natural world, as well as the lessons taught by elders to younger generations.

Text D: Sisters becoming birds

Long ago, in the village of Kati, before the arrival of outsiders, a family resided with their two daughters, the younger and the older. They nurtured the children until they reached maturity. One day, they were tasked with crafting string bags and sago bags for a community celebration. The sisters, pondering their futures, decided to venture into the Genemon trees to gather vegetables and other provisions for the journey. As dusk fell, they camped, feasting on their prepared food before continuing their journey at dawn.

Their conversation turned to aspirations of marriage as they traversed the path. Arriving at the grove, they diligently gathered the Genemon trees’ offerings until nightfall left them disoriented. They sought a way home but found themselves lost, stumbling upon a garden with ripe red pandanus fruits. Ignoring the garden’s ownership, they indulged, unaware of the owner’s approach.

Upon discovery, the owner startled them with a bowstring’s twang, prompting them to flee. As they escaped, the older sister’s attempts to follow her sibling led to multiple branch breaks until she landed on the ground. Unable to join her sister above, she resigned herself to the earth, transforming into a cassowary.

Meanwhile, the younger sister, nimble and light, soared into the sky as a Mambruk bird. Their unusual fate became a cautionary tale passed down through generations, emphasizing the importance of heeding parental advice and the consequences of disobedience when venturing into the unknown.

Text E: A violent giant

Long ago, a man had two wives. One day, they went to find sago, with the man cutting down a sago tree while his wives processed it. As they worked, the man went hunting and killed a pig. Meanwhile, a giant overheard the women squeezing sago and approached them. He tricked one woman into looking into his bag, captured her, and killed her. He then did the same to the second wife, placing both bodies in his large carrying bag.

As evening fell, the man returned to find the sago unfinished and his wives missing. Carrying the pig and sago, he set off and eventually encountered the giant. The giant suggested they make a fire and sleep, each on opposite sides of a large tree. During the night, the man saw the giant devour one of his wives. Determined to seek revenge, the man cooked the pig, re-tied the bag with faeces in it instead of pork, and left it on the fire.

The next morning, while the giant slept, the man took the cooked pork, crossed the Kowo River with a small canoe, and hid it. He sat on the other side of the river eating sago and pork. The giant, upon waking, found the bag empty and realized he had been tricked. He followed the man's tracks to the riverbank and saw him across the river.

The giant tried to cross, but the man deceived him into believing there was ford. As the giant waded into the river, the water reached his chest, and he eventually sank and drowned. This story is often told to children as a lesson: those who do bad things will ultimately face consequences. The tale serves as a moral warning about the repercussions of harmful actions.

Text F: Diving for fish

In the late afternoon, a pair of friends gathered, preparing to cook young cassava leaves, when unexpectedly, Brother Kosmas arrived. He informed them of a fish he had spotted at the Nimi River the day before, igniting their curiosity. They abandoned their cooking plans and set out for the river with makeshift fishing gear. With tenong rattan strands and a tree branch, they devised a clever method to lure the fish out of its cave. Despite their efforts, Brother Kosmas and Ansel failed to find the fish after diving into the cold waters. Disheartened but determined, the narrator took another plunge and eventually spotted the elusive fish under a stone. Armed with a spear, they attempted to catch it but initially failed. However, after a second try, they successfully speared the fish and brought it ashore. Back at home, they decided to cook the fish whole and share it among themselves, honoring their friendship and the adventure they had shared.

Text G: Shooting a cassowary

The story describes an adventure where the narrator, along with his friends Lukas and Agus, went to the forest near the Oga River to search for Nik fruits. They decided to split up to cover more ground. While the narrator was on his path, he saw a cassowary, and shot and killed it. He then removed a feather and placed it in his hat before heading back to find Lukas.

Lukas was setting a fish net in the river, and the narrator decided to play a prank on him by pretending he had found a dead woman instead of the cassowary. Lukas initially believed the story but soon realized it was a joke when the narrator mentioned the cassowary. They decided to call Agus, who was also searching for Nik fruits. The two went to find the cassowary while the narrator stayed behind to surprise Agus.

Once they located the cassowary, they tied it and placed it in the river to keep it fresh. They continued their search for Nik fruits but found only a few. Deciding to return, they retrieved the cassowary, plucked its feathers, and butchered it by the riverside. Each took a share of the meat.

Feeling hungry, they made a fire, cooked sago, and roasted some meat. Although one of them chose not to eat the meat, the others did. After their meal, they drank water and returned to the village. This story highlights their hunting skills, camaraderie, and playful spirit during their adventure.

Text H: A fishing trip

This story recounts a trip to Kowo River with brother Bruno Kakut. After school, they decided to go to the Kowo River, planning to stay at the Widi River, then to Udaben, the Kilok Kone estuary, and back. They prepared supplies including tobacco, coconuts, salt, MSG, and a small cooking pot, and informed their parents of their plans. Their parents advised them to stay together.

They began their journey, staying at Widi River for five nights, then moved upstream to Udaben for five days, fishing and catching shrimp. They used shrimp traps and fishing lines, catching many fish. The journey continued to Kilok Kone estuary, where they set shrimp traps and fished. While at Kilok Kone, they caught many shrimp and fish. After five days, they decided to return to Widi River instead of staying longer at Udaben. They brought the fish back to their parents at Widi River, who were pleased with the catch. The mothers organized the fish, sharing it with the family and neighbors.

The next day, the boys prepared to return to the village, carrying peanuts and other supplies. They were reminded by their elders of the importance of sharing

1 Preliminaries

abundance with friends and family. They set off back to the village, ending their fishing adventure.

This story emphasizes the values of family, cooperation, and sharing within the community.

Text I: The Benem rat

This story recounts an adventure involving the narrator, their mother, Yamuk, and friends as they journeyed to the estuary of the Wolok River. They left their village well-prepared and began their trek. As they approached the estuary, the narrator's mother decided to check a spot where a Benem rat usually nested, asking the others to continue along the road.

After a short while, the mother called out to the narrator and Yamuk, saying she had found the rat and needed help to catch and kill it. The two hurried to her location and found the rat hiding in the aerial roots of a tree. Despite her efforts, the mother couldn't catch the rat alone and asked for their assistance.

The narrator and Yamuk each reached into the aerial roots from opposite sides. The narrator mistakenly grabbed his mother's thumb, thinking it was the rat's snout, and tried to break it. The mother, feeling the pain, struggled to free her hand. Realizing the mistake, the narrator finally understood he had been trying to break his mother's thumb instead of the rat.

Throughout the confusion, the mother exclaimed in pain and clarified that the narrator was holding her hand, not the rat. The humorous yet painful misunderstanding was resolved, and the story ends with the narrator reflecting on the incident. This tale highlights the family's adventurous spirit and the close bond shared during their escapades.

Text J: The Muying rat

This story recounts an experience between the narrator and his brother Lukas involving a Muying rat. They were at the Wolok estuary where Lukas had planted a large patch of peanuts. As the peanuts matured, Lukas began harvesting them, forming small "islands" of harvested plants.

The narrator often played around while Lukas worked, throwing clumps of sand at him, and Lukas would playfully try to hit back. During one of these playful moments, the narrator noticed something unusual in one of the peanut "islands." Upon closer inspection, he discovered it was a rat's nest.

Excitedly, the narrator told Lukas about the nest, thinking there might be a rat inside. Lukas encouraged him to catch it. Hesitant but curious, the narrator

approached the nest. As he reached into it, he was bitten by the Muying rat, causing his hand to bleed. Lukas found the situation amusing and laughed, while the narrator, in pain and upset, went back home crying.

This story highlights the playful and sometimes painful adventures of childhood, as well as the bond between the narrator and his brother Lukas.

Overview of the texts

Table 1.4 provides an overview of the texts in this collection. Note that the table includes a hyperlink to the archived source files at ELAR.

A The origin of the moon

Introduction

Wot aip is a narrative lasting a little more than 13 minutes. It was one of the first recordings made during the documentation project. It was recorded by Alexander Zahrer on July 30th 2019, in video format.¹ The speaker is Patrisius Enip, and the recording took place inside the house of Lukas Autet in Upyetetko.

Summary & background

The story tells about a man and his sister. While her husband is gone on a trip, the woman refuses to let her brother eat some sago. One day, the man takes his revenge by hitting her with a bundle of thorns that he drops from a tree. Then he disappears into the sky and becomes the moon. As the woman's husband returns, he kills her by splitting her into two halves. One of the halves turns into a beetle, the other into a spider. The husband himself turns into a kookaburra bird who cries out for his brother-in-law every evening as the moon rises.

do so until the evening and then they collected all the sago they made and went home to sleep.

They slept and on the next day, they went there again. They did so until the third day. Then her brother said, "Sister! Since we are eating only sago all day, I want to go downstream to find some fish." After that he took some arrows made of splintered ribs of sago leaves and a bow, and went to find some fish down there. While walking, he was looking out for fish. So he got some fish, brought them home and cooked them. He cooked a lot and partly ate from it himself but kept some [of the fish] for his sister.

In the evening, she came back from the sago place and saw that he had taken some of the sago and cooked it. "Hey you, from where did you take the sago you cooked here?", she asked him and her brother answered: "Oh! It was from that sago we made. There is also fish for you. It is our dinner!" – "Huh!? We cannot eat that sago!", she scolded, "Your brother-in-law went to Awin. He went to the market. Let him come as well, then we can eat the sago. We always eat sago together so we cannot eat the sago now." Having said that, her brother called out: "Oh my goodness! What shall we have with the fish then? We certainly cannot eat dirt. Since we just made sago, we must eat from that sago." But all this talk was only in his mind, he did not dare

to speak out to his sister. So he kept his thoughts to himself.

At the next morning, they went to make sago again. He opened the stem, chopped it and left it for her. Then he went to find fish like the day before. As he walked, he remembered her talk from the evening before. She talked to him like that: "Tomorrow, you will not cook and eat the sago. Instead, you shall make the sago pulp. You only cook the pulp and eat the fish." – "Oh my goodness, alright", he said. Since she turned to him and explicitly forbade him to eat it, he left the sago. He brought the fish in the late afternoon. He went out and killed some fish and brought them home, where he cooked them in the sago pulp. When he was done, he had his meal. He took out the pulp of the sago and only ate from the meat of the fish. Then he made the other fish and kept it for his sister.

When his sister finished the work with the sago in the evening, she took off home. She came home to her brother and asked him: "So, how was your trip?" – "Oh, that's what I have brought and kept for you. I cooked it with the sago pulp, so that's it", he said. She prepared the food by taking out the sago pulp and threw it away. And then she ate the fish with some fresh sago. But her brother was stunned, since he had eaten only from the sago pulp. After dinner, he went

to sleep. His thoughts kept him awake all night: "Oh my goodness, what shall I do? We make the sago to eat, so we must eat the sago, oh!" He thought over and over like that. At the next morning he said, "Sister! Let us eat the sago today. If we keep on waiting for my brother-in-law, it will be too long. So can we just eat the sago?" But she just refused: "My brother, we cannot eat the sago. Let the brother-in-law who went to the Awin region come back first." He agreed and then he started to make plans.

He had to do something. What he went for was some sort of thorns. Some sort of thorns, and bees, and sharp objects and more like that. He brought all sorts of rough items and he wrapped them. He wrapped it into a big, rough thing. He made a huge package of that and he took it and climbed up a tree. He took it up a tree where he arranged everything. He hung it up there quite well. It was up there and should be part of his revenge. He did not care for his sister anymore, just because of the sago.

He climbed and arranged everything and it was high up there in the tree. Then he covered his eyes but nothing happened. There was nothing near him, everything was far away from up in the tree there. Then he stuck out his tongue. When he stuck out the tongue, the sky was suddenly coming closer. He recognised that this way,

he could make it come closer. It was good to know and he thought: "What will I do with that?" Finally, he went home.

He went home and his sister came later. When she came at night, he told her: "Hey sister! Guess what, I have seen a big bird's nest. It was huge. So we will go to kill the bird. I will drop it with its nest", he said. – "Oh, my brother, alright. We can go and get it. This will be good, since we made sago recently." So they first took some torches, one for the sister and one for the her brother. They walked until they arrived at the tree that had been prepared with the fake nest. "Sister, you keep standing here! I am going to climb", he said. And immediately, he climbed the tree. He climbed, and climbed, and climbed, until he arrived at the nest. Then he shouted down to her: "Sister, where exactly are you standing?" – "I am right here, my brother!" – "Just come a little closer!" He directed her right under the nest, so that when he would drop it, it would hit her. She moved according to his directions: "Alright, here is where I stand." – "Yes, just stay there! I want to pick up and drop the nest now. You just keep standing there", he shouted. And finally, as she was standing there, he picked up and dropped that huge nest. He dropped the nest that he made, it went down and hit his sister hard. It broke on her body and all the thorns inside, the

bees and all the bad things he loaded it with fell right onto her. It hit her pretty hard. Then he stuck out his tongue and as the moon came closer, he climbed onto it. He changed from the land to the sky, so he got onto it and soon became one with the moon. He just merged with the moon and so it stayed.

As for the sister, after the nest had hit her, she said: “What was that? How could that happen?” She was looking around but did not get any answer. Her brother was quiet, everything was quiet. He did not come down to help her. So from that time on, he had become the moon. “The moon is now much brighter than before, oh, maybe my brother has joined the moon?”, she said. She said this and then she went back home crying. Still crying, she arrived at home: “Oh goodness, he is my younger brother!” She was missing him badly and just kept sitting there. Finally, she fell asleep.

The next morning, her husband who had gone to Awin came back. As he came, he was looking all around. He kept looking around but did not find the other man. She was alone inside the house. “But where is my brother-in-law?”, he asked. – “Oh, the brother-in-law! It is a long story. It has to do with the sago. Since you went off to the Awin region, we would wait to eat the sago until your return”, she said. “That’s what I wanted. He went

to catch fish and hunt other things and he was cooking it with the sago pulp. And then it was like this: He did something to deceive me. There were all kinds of thorns, bees and similar things, and a nest. It was a fake bird's nest. He lied about it and he went up in a tree. He hung it up in the tree and dropped it to hit me. And when he had done all that he flew out to become the moon!" As she told her husband everything like that, he cried out for his brother-in-law. He cried for his brother-in-law and he was very emotional. Then he picked up a stone adze and he killed her. After killing her, he cut her in two halves.

The man had cut his wife in two halves. The story concludes like that: So one half turned into a beetle, the other into a spider. The beetle went into the soil immediately. The spider made a nest. And this nest is an imitation of the bird's nest that hit the woman. From then on, spiders kept making nests. But as for the beetle, it lives in the ground. Only when the moon shines, it wants to come out. In the evening, when there is the moon, it wants to come out and it makes a buzzing sound: "Oololok!" When we hear that, the moon is about to come out.

The man who had killed his wife took a stone axe, cut a termite hill open and went inside. He finally turned into a bird, a kookaburra bird. He became

the Kookaburra bird and from then on when the moon comes out, this bird usually cries out. He keeps saying "Baat totenek", which means "the brother-in-law is coming". He keeps crying out like that. That is the story about the origin of the moon. It was a story of our ancestors.

B The origin of the coconut

Introduction

Kelapa ambat is a narrative lasting roughly 11 minutes. It was recorded by Alexander Zahrer on August 5th 2019, in video format.¹ The story teller is Adrianus Yamuk, and the recording took place in a classroom of the elementary school in Upyetetko. Adrianus was seated at the teacher's desk in front of a whiteboard. As it was afternoon, there were no students present.

Summary & background

The story tells about a man who took his dogs on hunting trips in the forest. One day the dogs took revenge for only being fed the bad parts of the prey. They killed him and threw his severed head into the river.

When his wife found the head, she buried it near the river. Eventually, the first coconut tree grew from this head. The fruit fell into the river and got carried away, so that the coconut tree spread all over the area.

Parallel text

Kelapa ambat odo. Kaduk tana, ye yom ye amban yom ambip mim tiip, ye go anon kadap. Amkali bali winimo, bali wene wene awon ko. Bukan, ye bet a, ye aip mombe kemok balin. This is the story about the origin of the coconut tree. There once was a young man. He and his wife lived in a house, he had many dogs. He used to hunt in the morning, he hunted pigs. No, not he himself, it was not him who shot the pig. The dogs would bite and kill it and he would bring the dead pig back home and cook it. Then the man and his wife would eat the meat, and

they would give the bones to the dogs. They always gave only the bones to the dogs.

The dogs were thinking: “Oh come on! Just shoot it yourself, with your arrows and bow! From all that, you always give us the bones, although we were the ones who killed it! It is easy for us to kill it, then you bring it home and eat it, that’s not fair!” They thought like that and then one day they stopped helping him. They came back from the hunt and got nothing. So the man said to his wife, “Darling, when we are going, it was like taking a walk only. It seems there are no pigs. But it was strange. The dogs were always snuffling and growling at me. Next time, when you wait for me until it gets dark and the dogs come home alone, it might well mean that the dogs have killed me.” She agreed and he went off.

Another day, he went off hunting again. His wife stayed at home and waited until it became dark. “Oh, dogs, you are here. But where is father? Oh, father is nowhere”, she talked to them. The dogs just wagged their tails and stuck out of their tongues. “Oh, you dogs”, she said. “What shall this mean?”

So, they slept until the next day and when the day broke, she took the dogs and went out. “Where is he? Where is he?” Then they came to a river. The

dogs stopped at the side of the river. They had eaten him and thrown his head into this river. Now they just stood up there on the land and were watching the river below. "Come on, you dogs, that is only the river down there!", she scolded them. "Oh, maybe they have thrown him into the river!", she thought and then she saw it: "Yes, it is true!" They had severed his head. They had thrown it into the river.

The woman took a palm tree rib and cleaned it. She took three of them and made a fork from it. She connected it to a stick and bound it with a string. Then she tried to get the head out of the water with the fork. She stabbed for the first time, but the prong broke. "Oh, not like that", she said. There were two prongs left now. She stabbed again but second prong also broke. Just one prong was left. She stabbed it and this time the prong went in. It went into the floating head successfully, so she could take it quickly. Then she took a rib of a palm tree and tied it and brought it back home.

She brought the head home and dug a hole next to her house. But the hole was not large, she made a small one only. Then she wrapped the head with the rib of a palm tree and put some leaves down in the hole. She put the wrapped head on it and finally she put the soil back on it. When the hole was closed, she simply waited. She only could wait but it seemed that the head

of her husband would not decay.

When she checked next time, she saw that there was a tree now exactly at the place where she had buried the head. It was like the palm tree we call Kuk Kimit. "Here are leaves like the ones of Kuk Kimit. Is this a palm tree? Maybe I should cut it? Oh no, I cannot cut it." She watched it day after day, "Oh it is not a palm tree. It is not a palm tree! This must be what they call a coconut tree", she said. Then she took some soil and heaped it up. It became a big tree and it had several stems and some leaves. At dawn she heard a strange voice. She heard, "Bian-bian-bian! Bian-bian-bian! Bian-bian-bian!" It was only the word "Bian" repeated three times and then it stopped. She looked and saw: "Oh, there is a bird!" This bird was sitting on the leaves of the coconut tree. It was a wild chicken. It was standing up there and making sounds. "What was that? It said 'Bian-Bian'!"

In the morning she prepared her needs. She took everything and she took some seeds of the coconut tree and went to the Bian river. That's where she planted them. She planted them at Bian river and then she piled some wood and made a fence. She cut some wood and bound it with strings

kalapa odo, nop kelen e, temuden go, "Eih! Adi go." Ogan otbop bet "Mayang o", enggaip. Nup otbop a, ambanga ye otbop, "Eh, namang aip teboden o", engge kemip. Teboden kot yanam an a. Nolak yanop an. Nolak tokot an e engguden got kole, yop aip bodoben. Bodoben ogo wene ta yado atma yanop. Bodobone wene wene kelegaun go wene yumunene, nombelen. Nombelene go wene Bian kebet odo okune "Ssss". Kuk wilinuden onet kuk wilinuden, waum odo kalapa mo. Kalapa kok odo kuk wangga odo ma, ma, koke Bian kubun-oden, Bian bet ok kane wenen. Ta Bian tiip ok tikap wani tiip ye kaduk ombet: "Moyon mok odo medep an kai?" Kane wene kombenip, "Aih, enggon, edo kelapa enggaip eyen e." Enggenip ket, ombet okune ombet mulai: Ombet kanenipket, "Enggon, ne aip an, kep aip an." Mim mo kane wini mo, alop mo kane wini mo, alop mim mo kane wene manggi mo, alop mim, kanin, anggo. Okune benbaip. Benbanipket wene alu-mip kot, ko, ombet wene wene, kuip! Kumun ane kaloden, kelapa odo.

Kole mim mangguden ye kaduk odo, odo kalalang bet ok nangge kemip. Nangge bulut bet a, owet bet, owet belon bet a. Waum telene, aninggo Yopke engge kemip odo Komoyan otbop an. 'Midepan' odo nup odo: "Ok anem". Animan kanggon anem. Kep kat a, okunen. Jadi nup ko 'Ok Anem'. Okunenupket, owet bet telenupket, animo kumup uyen. Odo ami kono amtem an. Kole konoptem ko alop mim. Tapi

then she waited for the coconut tree to grow up. Finally, she saw it, "Oh, it has come out." It grew and indeed, there were some stems. Initially, she thought the stems were empty but they bore fruit. The tree bore fruit and not only one side but on the other side as well. She waited until they were ripe and fell down. They fell in the Bian river with a sizzling sound, like that "Sssss". Whenever a coconut fell into the river, the water took it away. And people who were living downstream saw it, "Oh what is this?" They took and kept it then they said: "Oh guys, this is called coconut." Each time someone took out a coconut from the water, he would share it with all the others. Someone would get just one, someone would get two, other people would take three and plant them, three, four, five. They took the fruits like that. And some of them were planted and they spread out to become coconut trees.

So earlier, the woman had pierced the head where people nowadays make a hole in the coconut to get the water. They make a hole with a stick, with a small bamboo stick. They put it inside and they would call it "Yopke", that is a word from the Komoyan subdialect. You know, so it was like that. We still do it like that and we insert the bamboo and that is how we usually drink. So there are three holes. But

Okunen. Kole okunen, oyen.*

we cannot make three of them, there is only one hole. It was like that and then what they are calling coconut has been spread. That is a story from where my mother lives. I used to listen when she told it. So it's like that, that is it.

C The origin of the bat

Introduction

On Yom is a narrative lasting roughly 13 minutes. It was recorded by Alexander Zahrer on August 5th 2019, in video format.¹ It was immediately recorded after *Kelapa ambat* (cf. Chapter B) and therefore in the same setting. The story teller is Adrianus Yamuk, and the recording took place in a classroom of the elementary school in Upyetetko. Adrianus was seated at the teacher's desk in front of a whiteboard. As it was afternoon, there were no students present.

Summary & background

This story is about parents who denied their children access to the sago they stored in their house. The children formed certain body parts from natural resources and eventually turned into different kinds of bats.

The bats were hanging from the ceiling and flying around in the house, making a mess with the stored sago. When the parents came home, the bats flew out and never returned.

At the end of the story, the narrator tells about the taboo of eating sago before hunting bats. This food taboo is deeply linked with this story.

Parallel text

On Yom oye kaduk odo. Kaduk, ye go ye amban yanop. Yu, amban, yu taman ko mim an.

This is the story about the origin of the bat. There once was a man who had a wife. She, the wife, she had a brother.

Mim jadi, kedone om wine kolong-goden. Ke, "ade yanop kole, kup taman

One day, the man cut down a sago tree and said to his wife: "In this place,

¹The original recording session is archived with the ID muyu032 in ELAR at: <https://www.elararchive.org/dk0601/>

C The origin of the bat

yanop kole, om ko alume!" Ma ye go Awin ambip wenen. Baat, jadi ye baat ko Awin ambip wonoden. Wonoden got yi bet mo tiip. Tionip ket, wonoden gole tiip, koe. you have relatives and you have a brother. You can make sago without me." Then he went off to the Awin region. He went off and she had to stay alone with her brother. There was the sago which they processed and brought home. After they made the sago, they stored it and she would announce: "Oh, you just wait, yeah? You all just wait for him to come back. Let him come back first before we eat it". And the adults would withhold the sago, they never gave the sago to the children.

The parents themselves never gave it to them. But the children begged: "Oh, come on, please give us some sago to eat!" The woman and her brother would go and chop sago. They would bring it back home. They would take out the "Ombenep" and would they share any sago? – No, they never gave it to the children! They collected the sago to save it for later. And they kept doing it.

One day when the adults were off to make sago, the children had a discussion. "Guys, what shall we do, what shall we do?", the older brother said. There were three brothers, the older brother became a big bat in the end.² One of them became a "Kudumbop" bat, another became a "Dimin" bat and the last one became a "Tinggulut" bat. They actually were four children.

²There were actually four brothers. The speaker corrects this mistake at the end of the paragraph.

Kedonip a, Aluptem tunuk bip koe. Aluptem tunuk ko beonip, nup otbop odo Aluptem an. Kedo Aluptem tunuk bip koe, Aluptem tunuk bip. Kedo yemen tim watmip. Kedo yemen ot watmip. They took some sticks of a Genemon tree. Then they took some bars of a taro tree. Finally, they picked some taro leaves. After picking the taro leaves, one of them asked: "Guys, how is this done correctly?" – "Oh guys, we make it like this!" So they took some sticks, connected them and then they stood and looked at their faces and their toes, they looked at their feet and hands. "How can we make it?" – "Oh, guys, look here", so the older brother taught them how it was done. They connected Genemon sticks with the taro bar. They took a taro bar and inserted the sticks. They just took the taro bar and there were some sticks, they would insert those Genemon sticks, stuck it in and just repeated this until they had the claws, like a hook. There is a kind of rattan called "Nong tengge". The top of Nong tengge is pointy like a hook. They took some of them and they stuck them on the taro bars. There were five on one side and five on the other side, so it was enough.

It was a taro bar. But they stuck in it with the Genemon sticks. They stuck and they formed all body parts from that: The shoulder bones, then the ribs, these ribs and the spine. But at this bone here, that was the thighbone.³ They set it here and after they set it, they made wings and fur, and then went on to the head and every-

³In this part, the speaker points at his own body to illustrate.

C The origin of the bat

kenedem a, kidiptem a, monggodem a, onongmonip, “Enggon ninggiduk ode?” – “Aih, enggon ninggiduk ode.” Oya go bip ki. Ombet bogilipket, bionipket, be kane talaip. Tionip kluk, otbop aip balin. Ta om ode, “Psh!” yonbin bet kombipten go okune:

thing around. Then the ears, nose, mouth – they made them all. “Guys, what about the teeth?” – “Oh guys, the teeths should be ...” They made them and put them on. After they had put them on, they broke it and then they kept making all the body parts the whole day. They made them all and finally, they were standing there. “Oh wow! Wow, guys!”, one of them said. “Oh guys, it is working!” They others were still standing, but he was flying already. The bat was flying. “Oh! My brothers, it is working”, he said.

Then it was someone else’s turn. “You there, just try to fly!” – “Hey, yeah! It is working” and he was flying. “Oh, come on boy, it’s your turn! It’s your turn to fly out now!” – “Oh, it’s working!” And again, “It’s working”, that’s it. They flew out and everything was completed very well, that’s it.

But now let’s come back to the parents. I told you about them just recently. It was the story where the brother-in-law went to the Awin region. That was about the origin of the Moon.⁴ In the story about the origin of the bat, the married couple had four children. The children did what I have been telling you because of the sago. They stayed at home quietly until it was getting dark but then they started. They began to hang themselves on

⁴The story and characters seems to be overlapping with the story *The origin of the moon* (Chapter A)

"Pfbrrr!" wani odo okune, amkutmon adep okune. Wadi mene amidak bon wene wadi bet tole wano bet tole wom odo om kombipten go okune: "Pssss!" Om on. Moyon mok!

the roof, the rafter and the shelf. They hang themselves up and stayed quiet. They stayed quiet, they did not talk. But the sago, "Psh!", when they kicked it, it went like this "Pfbrrr!" It went down like this, it bursted to dust like this. It went up and down to the floor, up and down, and they dropped the sago, and it went like this: "Pssss!", the sago. "Oh my godness!"

When the parents came back home, they did not notice any sign of their children. "Did the children leave?" – "Well, the door is closed firmly! What does this mean? Children, are you in here? Oh, it is quiet in there." – "Did they go out? Oh no, they did not go out!" They opened the door and "Pung!", they kicked it open. "Oh no, stupid children, what did you do to the sago?" – "Oh friend, the sago, they tore it into pieces!" – "Oh! Mother! Those damn children!" That's how their scolding went on and then "Prrrrr!", the bats went out through the door. They went out one by one. The Kudumbop bat flew around and the parents said: "Oh! Let's take the fire tongs that are lying here." They tried to hit it exactly here at its spine and so it got a small waist. So, from that day on the Kudumbop bat has a lean waist. And they went out just like that.

The one who flew away first was the Yom bat. But the one she hit with a big fire tongs was the Kudum-

On Yom odo om yeman bet kemonip ket, on Yom kelebip, tana-tana odo.

Kole, on Yom bat wenem enggi go om aip ani balin. Om ko, ambanga yi odo om aip ane kemok balin. Om ani balin. Ok ani balin. On Yom bat wenem enggi go, tokot wenebimo kemip. Wenenip ket, wene temi golo, "nimbin tana aline balanun o", ko. Bom kale kemip. Ta wene mudut kobi a embet talanip odo, talanip odo ta ye komop yanop an onongmanip. Ye komop ko ta wene, wenenip ket yumun bet binggi mon. Ye ano badambelen yeman odo. Tim-biliget ye ano badambeli yeman odo. Odo kibik ko ogan odo tinim yanop, ogan timin oyen. Ogan tinim a senapan angin. Odo wene yumun bingge, komop odo kumungge kemip: "Kon wanam a, kon wanam Tom, Tomkon, kon wanam Tom Kayon kup ko, tim-belenep a, timbele tane yalenep a muk eledik adep bele golo, kaduk aninggo ne bet an." Ye aninggo kumunggeneget, "Ne bet bilinala yo!", engge ne yumun

bop bat. At night, when it flies, it makes a sound like: "Wauk-wauk wauk-wauk". When it flies "Wuk-wuk" and "Pak-pak", that is it. That is the Kudumbop bat. But the Dimin bat usually comes in the evening and makes a sound like: "Peet-peet peet-peet." It is called the Dimin bat in our language. Finally, the Tinggulut bat, when it becomes evening these small bats usually keep flying around here. It's the Tinggulut bat. And that's all of them. They became bats because of the sago. They were children and turned into bats.

Until this day, we do not eat sago when hunting bats. Our ancestors never ate sago. Do not eat sago! Do not drink water! When planning to hunt bats, they usually go without all this. When they go to hunt, they would leave the women and children at home. They would throw a magic spell. And when they find some bats on a Mudut tree, they would cast a certain magic spell. The magic spell goes like this: They first go and urinate. It's for staying calm while shooting. (Nowadays, the foreigners have a gun. A foreign gun, an air soft gun.) They would urinate and whisper the magic spell: "Lady, lady Tom, lady Tomkon Kayon, you sit here and you sit and stretch your legs like a cross and give milk to your child because I am the one who comes to you." He speaks his name and then he says: "Let me polish it" and he urinates and then he rubs

binggenenet, kane ap ya tilinalegelet ko, ano go badambeli mo kemen.

Okunen. Kole, om ko ani balin. Kumunggene yumun bet, kumunggene tilinalegilipket, on Yom bat ko wini mo kemip an. Kibik ogan keloden oyot, ah! Ogan keloden jadi, nowan an. Wene mombe kane mananip. Nowan, om aip anok go wenepten. Embet, onngo bet a ekune, mokap wane kedo wenen, on Yom ko. "Aeh, mok kede adep an ge? Wene adi bet a, ah, on Yom ko yo! Yi go om ye madan bet kemonip ket kedo on jom kelebip kole yo! Om kolem amop kai", enggaip. Ambanga bet. Ambanga bet olale kane ta ambanga ye tana. Yi tana bet, oye tana bet, ta yi bet ta nup. Kole, ne taman Yakop edo, oye emba bet olalimo kemen. Olalanon go: "Ne tana! On Yom ko tokot balin o", ekune-neget, olalon got, nup ko wedaup, "oh!" Ih, odep kole. "On Yom ambat ko oyen yo", enggaup. Okunen.

it at the tree and then he would shoot his arrows.

It's like that. So, do not eat sago before hunting. They would cast the spell with urine and rub it at the tree. That's how they used to hunt bats. Oh, but nowadays, we live in the modern era. It's the modern era, so it is much easier. They can just go, shoot and bring it back home. In the old days, you would not shoot anything if you had eaten sago before you went hunting. The one over here and the one over there, they would already have flown away. "Oh, why is this? They were up there, the bats! They became bats because of the problem with the sago! Therefore, the sago is very harmful", they said. It was the ancestors who said so. The ancestors told it to their children. From their children to their children and from them to us. My friend Yakob's father would usually tell this story. He would always say: "My children! The bats are not here for no reason." And when he told this story we listened to him astonished. Okay, so that's it. That is the origin of the bat.

D Sisters becoming birds

Introduction

Sisters becoming birds is a narrative lasting roughly 7 minutes. It was recorded by Alexander Zahrer on October 16th 2019, in video format.¹ The story teller is Xaverius Kerenjop, and the recording took place in his house in Merauke.

Summary & background

This story is about two sisters who got lost in the forest while they were collecting vines and fruit for a party in the village. After wandering around aimlessly, they eventually found a garden with ripe pandanus fruit. While they were eating the fruit, the owner of the garden approached and wanted to scare them away.

Deeply frightened the sisters fled up the tree. However, while the first sister reached a high branch, the second sister stepped on a weak branch and fell down to the ground. Suddenly they transformed into birds to escape. The sister on the tree turned into a crowned pigeon, while the sister on the ground became a cassowary.

children. They had two daughters, a younger sister and an older sister, and they took care of the little ones until they were grown up. Every day, they did just like this: "Here are a string bag and a sago bag, go to the Genemon trees!" Because there was a grove of Genemon trees. The sisters would go there and collect Genemon vines and other stuff. They would use them to make string bags.

Sometimes people would come and tell them: "People want to have a party, so make many string bags and sago bags. We need them for the party." And so they did. Okay. That's how the two girls were growing up.

One day, the sisters, the younger and older sister, were making secret plans: "Tomorrow, we will go out to take some Genemon fruit and other stuff." Since it was far away they had to prepare carefully. That night they cooked sago and other things. They prepared some food for the trip on the next day. Then they had dinner and went to sleep.

At the crack of dawn, they took off. They went to get Genemon fruit and other stuff. And since the women were still young, they had a conversation about typical young woman things. They talked about their desire to marry a man while they were walking. They walked on and on and on and finally, they arrived at the Gen-

mip oyeki! “Keto kete wananup?” Okune, ketonip a, opkonggaip ka okunon go suda, anggipten. Om animan ombetmo anengga kole anggipten.

emon grove. They picked Genemon fruit until the evening. But in the evening, they got lost. “Now, where shall we go?” It was like that and they were thinking about what to do but there was nothing they could do. So they decided to wait for the next day. They just ate some of the food and slept.

The next day, they wanted to go home and searched for the road. But although they were trying hard, they could not find it. Okay. It was too difficult, they were just walking around: “Where is the way to go home?” They went on and on. “Oh, there are people!” They arrived at a garden. When they arrived at the garden, they felt lucky because they had no food left. They were starving. There was a pandanus, a red pandanus fruit. It was ripe already. “Hey, sister!”, the younger girl said. “Hey sister! There is a red pandanus. Come here!” So okay, they went there and climbed the tree and ate the pandanus.

But it was someone else’s garden. An old garden. So while they were eating, the owner of the garden heard them: “Oh, there are voices.” There was much talking, so he went to see: “Oh, these two women are eating the pandanus fruit!” While they were eating the pandanus fruit, he made a sound swinging a bowstring and yelled at them. The two women were frightened and tried to escape

in fear. They climbed up on a branch. Since the younger sister was light, she stepped on it and was out of reach. But the elder sister wanted to step on a branch as well but it broke. She quickly jumped on another tree but that one also broke. And again she jumped on another tree. It was the branch of a "Wet" tree, she stepped on it and when the branch broke, she fell down on the ground. "Ouch! Oh younger sister, I fell down! You stay up there alone. I'll escape on the ground." She said like that and then they went away. Suddenly their hands were waving in the air. They were shocked as their hands turned into wings. As they got wings, they suddenly flapped their wings like birds and escaped.

The younger sister had become a crowned pigeon. But the elder sister was down on the ground. She said: "Oh, okay! I can't climb on the tree. I'll stay on the ground and walk around like that." It was a cassowary that she turned into. So that's what parents and grandparents usually tell us. Whether you are going out or going to work or wherever, you must tell your parents before going out. That's what they used to tell their children. They need to tell their parent so that they always can find them when they stay in the jungle for the night. It's like that. Yes, now back to the the sisters. While the older sister became a cassowary, the younger sister became a

eto biasa. Enamba ka, oni welet, ta yi tamana, yi tana, olaye bilimo kemip. Okune atep yeman. Enamba, woyam-bang, okune okpotom oto ninon kanon. Okune, olaleyimo kemip. Kole okune atep an.

crowned pigeon. It was like that. This is normal. Parents tell this story to their children or older sisters to their younger siblings. Parents and grandparents passed down this story from generation to generation. They usually tell it like that.

E A violent giant

Introduction

The giant is a narrative lasting roughly 10min. It was recorded by Alexander Zahrer on October 16th 2019, in video format.¹ It was immediately recorded after *Sisters becoming birds* (cf. Chapter D) and therefore in the same setting. The story teller is Xaverius Kerenjop, and the recording took place in his house in Merauke.

Summary & background

This story is about a violent giant and a man's revenge on him. The main protagonist was only shortly absent from the sago place when a giant tricked and killed his two wives, capturing their bodies. The man returned, encountered the giant, and witnessed him devouring one wife. Seeking revenge, the man tricked the giant by replacing cooked pork with faeces. The next morning, the giant pursued the man across a river, where he was deceived into thinking there was a bridge. As the giant attempted to cross, he drowned.

The story is told to children as a moral lesson about the consequences of wrongdoing.

Parallel text

Eyuk, eto tana ma, tana-tana nangmimo kemip. Ini, nangma, enggimok yeman. Nangmimo kemip ye otbop ini olalane keman eyen.

This is about kid's fights. About their urge to fight. I want to tell this story about their fight.²

¹The original recording session is archived with the ID muyu067 in ELAR at: <https://www.elararchive.org/dk0601/>

²It's not fully clear what the speaker meant by this introduction. The story is a narrative about a man outwitting a violent giant. Maybe he meant here that the story is told to violent kids who are provoking fights?

Omotom a, enamba wonggo omotom. Katuk mim ombet amban alop yanop an. Ini amit mim oto, om bat winipten. Wene om wien. Wionen, alumen. Okune tioden. Tioden go ta kon ma, kon yu kanggon kopomonun, omon ogo

A long time ago, there was a man who had two wives. One day they went to find sago. He cut down a sago tree and chopped it, while his two wives made the sago. When he finished chopping, he said to his wives: "Since I have chopped the sago, you go on squeezing it. You keep squeezing the sago, but I want to go hunt." They agreed and off he went. He was hunting for pig. And indeed, he killed a pig.

But while the two women were squeezing the sago, a giant came along and heard them. "Oh, sounds like someone is making sago. What is it?" He approached quietly but he saw only the two women. He called them: "What is going on down there?" – "Oh, we are chopping sago." So he came and sat down on the trunk of the sago palm. While he was sitting, one of the women squeezed sago and then left her place to take some new sago from where it had been chopped. But the sitting giant lured her: "Oh friend! Please, look at this here! My string bag here is a very nice one. Come and see it." – "Hmm ... where is it?", she went to see it but suddenly he grabbed her and put her directly into the bag. Thus he killed her immediately and put her into the bag. The bag was large, very large.

After that, he kept sitting there on the trunk. While he was sitting there,

kale kolun ta mene omon kili ba engge munun. Menenun a, "Ah, ma kon ma ote, aih!" – "Oto tidak tahu, ok yo wati wunun oyot kole. Ma omon ogo bene wene kopomeket", onggon. Anggaktum bet onggon. Keto awon ogo ane kane monon oto okune, timinggane om yanop okune kito towonon.

Wene "Eih!" Wene okune anggaktum yom okune oya, baku dapat. Anggak-

the other woman was kneading sago. Then she threw the finished sago on a pile and came to take a new hunk. She came and asked: "Oh! But where is the other woman?" The giant answered: "I don't know. She went upstream. Come on, just take that raw sago and squeeze it!" So she took some raw sago and put it into the midrib of a palm leaf. After doing that she wanted to go. "Oh, friend! Look here, into my bag! Look at this one, oh, it's a very nice one! It is colorful and very nice so please come here to see it", the giant said. "Okay, where is it?", she said and went to see it. And suddenly he grabbed her, killed her and put her into the bag. His bag was large, so he could put two women into it. Then he carried them away. That's it!

It was beginning to get dark and the giant was carrying the two women whom he had put into the bag. He went on until he passed a slope. Meanwhile, the husband came back and wondered why the sago has not been finished. "They have not finished squeezing this!" So he called them repeatedly but did not get any response. They were gone, it was quiet. He quickly put the sago flour into the bag. Then he went on carrying a pig that he had killed. He carried the pig on one shoulder, the sago on the other and thus he went downstream.

The man went until he faced the giant. He met the giant right there.

tum aip okune bulungge kombon oyeki. Anggaktum aip bulungge kombon go, "Eih, kep oto kete bet menep ko", enggon. "Ah, ma kep ote?" – "Ih, amnomnoten eto kete wana enggenepket?", enggon. Suda, anggon. Yok oto nanggaen. Awop oto keyap-keyap kemen go okune tenen. Anggaktum oto tione wene, kaduk aip yopnoten go okune suda. Konopim batanggoten iye ki. Konopim batanggong go wene, kombanon go embon kom oto okune kombanon, kombanon go, "Wuuu!" monimo. Kemen go, "Aihh!" Tapi amnom ege temoten, "Ahh! Kep an ini. Ne nimbin a tana oto kep okune yenkaep, ne amban o! Ne ambana alop oto kep yenkaep kot." Yok oto nang-

"Hey, where did you come from?", he asked. – "How about you?" – "It has become dark already, where do you want to go?", he wanted to know. – "Oh friend!", the giant said. "It has become dark now, so here are buttress roots of a Yom tree. On the other side over there, you make your hut and light a fire to sleep; and I will use this side here." And so they did. "Here?" – "Yes!" But the man had a bad feeling. "Oh, he surely hit the two women", he said. "He killed them." He brought the Yok³, some woods and other stuff and started cooking there. He roasted the pig while the giant was on the other side of the buttress root. While the man was cooking the Yok, he kept the fire lit so that it illuminated the area. So he could watch the giant taking one of the women out of the bag and swallowing her as a whole. "Oh, you did it. It was you!", he thought to himself.

The man went to sleep. The fire was lit to roast the Yok all night long. But the giant who was sitting swallowed another human, like he did before. Then the giant slept very noisily. He slept restlessly and suddenly farted very noisily. "Wuuu!", he yelled out repeatedly. But the man saw the giant despite the darkness. "It is you! You killed my family, my wives!" He roasted the Yok until the morning and when dawn broke, he opened the Yok

³A Yok is a piece of pork wrapped in bark. Sometimes vegetables and sago are added too.

gaen go nakon e, nake wenen oto keyap, keyap ketonen a, Yok ogo balaknanen, awon etawo oto men tem, yowo tem numbunggaen. Aih, yok oto ta okune yenenggaen. Wom oto embon wenepen. Okune go ta Yok tutup kele ta awop nanggaen. Yok oto kasi naek keloten. Kane tonoten. Kane tonoten go mene awop talep tenenen tenebanon yeman. Awop oto eya nanggaen go tenoten.

Ah, okune nakoten gole, anggaktum oto yem keto konop yek ege temon e, "Eh! Awon Yok oto balaknaok balin." Okune tenoten gole konopim anggoten. Ma katuk oto yok balaknaen o, awon etawo oto numbanggane, keto wonon. Wene wene wene, temon go, ok talep an, ok talep, ok Kowo. Eih, oya to ta kono belon yanop an. Kono belon yanop kole, suda. Kane, keyap yem ye men, yowo etawo oto om etawo oto okune, animan. Oto be kono tem kemone, keyap, ok yunggane kepetma. and took the pork out. Oh, but he re-tied that Yok. He first defecated into the Yok and then re-tied the Yok and lit the fire again. He put the Yok on the fire again. He raised it ever higher because he was worried that the fire will light up and burn the Yok. Then he fanned the flames and it was lighting up.

Meanwhile, it had become morning, so the giant secretly cast his eye on it. "Oh, the Yok has not been unwrapped yet." It was still on the fire so he fell asleep again. But what the giant did not know: The man actually had opened the Yok. He had put the pork and everything into his bags and went away. He went on until he saw a big river, the Kowo river. There was a small canoe. He took it and also took his bags and stuff and sago like that, all the food. He put everything into the canoe and quickly rowed to the other side. As he arrived at the other side, he hid the canoe in some grass, rattans and woods and left it there. Then he sat down at the river bank and ate some sago and his pork from the roasted Yok.

The giant looked around. "Oh come on, he did not open the Yok yet!" He called for the man. "Hey, what's up? This Yok has not been opened here." He kept calling but it was quiet. "Hey

⁴What is meant with 'bridge' here and subsequently is a ford, i.e. a shallow spot in the water where one can wade through the water.

newong-newong an. "Ah, kep oto, kep oto kete wenotep koe", enggene ketone, awon Yok ogo buka kelon. Buka kele temon go "Ih!" Awon Yok ogo balaknaen. Balaknane temon go "Ih, wom oto nowan." Tit aip palin. "Oh, eto ne kikmote kole keto kombe wonon yo!" Keto yenotom kakman, yenatom kakman an. Yontem taman tanggoten. Bomaen go wene wene wene, ok kepet nanggon. Temon go yanam an. "Eih! "Ketekune yato wenep ko?" enggon go monggotem oto talep kole ok oto okune ane wonon go okune. Kawut. Ok tem kupunoten. Okunen,

you, where did you go?", he said and started to open the Yok. He opened it and looked inside. There was no pork. "Oh, this person cheated me and took off!" He recognized footprints, there were footprints. He tracked him over a long distance. He walked on and on and on until he arrived at the river bank. There he saw the man. "Oh! He is sitting over there at the other side. Hey you! Where did you cross the river?", he asked. The man answered: "Oh, you can just come! Just come like that, come on! There is a bridge⁴ over there. That's how I got here." The giant came and said: "Oh! I think you are cheating me!" – "Just come like that, careful. Come, come, come!" He talked like that so the giant came until the water reached up to his waist. Then he turned around and saved himself back to the shore. "Why do you run away? Come again! It's ok, you just come here like that, come! There's a tree you can step on", he said. So the giant tried again. He went on until the water reached his chest. "You are lying to me again!" – "Why should I keep on cheating you? It is the truth!", the man said. He moved along the shore and talked like that: "Come on! Just come a little bit closer to the middle!" He went on carrying his belongings. The water rose higher and higher. "How did you cross the river?", he said and his mouth was large so he drank water that entered while he was speaking. Now everything happened quickly.

oyen.

*Kole, oto tana-tana olaleyimo kemip
oto. Ege: Wene katuk yena tap ke-
meyanp oto, tetap ah nup kanggon,
nup kanggon, atek-atek kole, ta nup
kanggon okune atep an. Okemanon,

F Diving for fish

Introduction

Diving for fish is a narrative lasting roughly 7 minutes. It was recorded by Alexander Zahrer on August 6th 2019, in video format.¹ The story teller is Galus Kolop, and the recording took place in the house of Lukas Autet in Upyetetko.

Summary & background

This narrative is a short personal story about three friends who went to catch a fish. The narrator is also the main protagonist who dived in the river and eventually killed the fish with a big spear. They then went home and shared the fish.

This is about when we spent the afternoon catching a fish. I want to tell about it.

One afternoon, we were sitting around and wanted to cook some young Cassava leaves. We were just about to start cooking, when suddenly another man came. It was brother Kosmas. "What are you doing this afternoon?", he asked. – "Oh nothing", we answered. "We were about to cook these young Cassava leaves" – "Listen. When I was travelling yesterday,

F Diving for fish

odo kombe kolenup ko, kawut, nup al-opmim okune, ok Nimi wano wunup. Wenenup a, wene kim bet, nong tenong watmogolup ko, be wunup.

Be wene, ok ani kele, nong tenong odo, benggalolup ko, ap aane, ap kung wadi go yenenggagolup. Yenengge wane-golup ko, kane, bendem wangga go, ok-bulap a alibo golup ko be kane bendem wangga. Kilinggup kolo ton konop ogo, wip tubunok go tebok yeman. Kilingge, kilingge wanogolup ko, kane tebupten.

Kane tebo go, ta kadukma amben. Ambo Kosmas ye adin amben. Ambe ambon walon ga, ambon walon ga, ambon walon ga, "Aih, nowan an." Ye bet mo wene yuluk kolone, kolo tebon. Ta kedo kadukma. Ansel, ta ye kedo nineben bomaen. Ambon walon, ambon walon ga, ambon walon ga, "Ah ye yanggon temenggi nowan." Yuluk kole kamene, adon tolonggaip. Adon tologadip e ta, ne kubunan. Ne kubune, ne ambon walan ga, ambon walan ga, "Ih, kadek-kadek an eh". Wene yuluk aip kelon e, yuluk aip kolon go, ta kolo teban. Kolo teban e, adon tologaup. Adon yanggon kudokmo yuloden gole. Kudokmo yuloden gole, adon tolonggadup.

I saw a fish, down at Nimi river." Immediately, we set the Cassava leaves aside and the three of us went down to Nimi river. We went to the road and we picked some strands of Tenong rattan and took them with us.

We took them down to the river, where we divided the strands of the Tenong rattan and cut off the branch of a tree. Then we tied the rattan to the top of the branch. Having done all that we took it to the cave there, there was mud. We applied some mud to the wood and then took it to the cave where the fish was living. We stuck it into the cave so that a fog would cover the eyes of the fish and make it come out. We stubbed it and when we were done, we took it out again.

After taking it out, one of the guys dived down. Brother Kosmas dived first. He dived and searched, and searched, and searched but he did not find it. He was cold, so he came back out. Then another man, Ansel, he went in next. He searched, and searched, and searched, but he did not find it either. They were both cold so they came out and warmed up in the sun. They were sunbathing and so it was my turn. I went down and searched and searched: "Oh, it is too difficult." I was cold too, so I came back out. I came back out and we were all sunbathing. The sun also shone really well and we could warm up our bodies.

Adon tolonggadup e, "Ah ma, kip ko ma tolongge bilip a ta ne bet ta kubune, ninebe tema", enggan. Ta kudo ninebin. Ambon wale kane ogo wene ogo wene, bot dem a, ap tem a, ambon walan ga, kadek-kadek an. Wene ok kebet, bot dem bot dem ombet a, odo teman, teman, teman go, "Aih, ege anggen." Ege anggen go, kedo tebeni, yi kumunggan. "Ah, kawat talep ogo kadime yo", enggan. "Kawat talep ogo kadime", enggan. "Ah, odep kole, temenggepten", enggip. "Eyuk, temenggaden o", enggan. "Bot dem, bot tawap tem ege anggen ge", enggan go, kane kadip ko kudo winin.

Kudo wenoni, momban ka, kenambun belewane. Okmim, belewaen jadi, kedep mombaden enggan go, "Ih, temaden go wane komboden o." Ta amboin, amboin, amboin. "Ah, wane komboden o", enggan jadi. Kido amboin, ambon walan ga, "Aih, kadek-kadek an." Kima wonoden non enggeni go, ta kima ambon walan ga, "Aih, nowan-nowan." Ta mene wiyam oya bet teman ko, eih, ta tamonombe anggen. Tamonombene anggen kole, ta mombaden. Onet ki kolem momban begini kawut, pasang odo wudo anggado wene angga nanggoden gole kawut. Wene pasang kidip wangga bet ninaden. Nineni, kane kedo minin.

Kane tebe awim, awim angga komban go, anggen. Anggen go, tionup. Adon tolongge wane, kido ambo Kosmas ku-

As they were sunbathing, I said: "You just go on sunbathing, I want to go down again. Let me dive and have another look." So I dived down again. I searched it and looked among the stones, among the woods – I searched, but nothing. Then I went to the side of the river and there, from underneath of the stones, I saw it. "Here it is!" It was here, so I came out and told them. I said: "Please hand me that big spear." And they immediately concluded: "If you want a spear, you must have seen it." – "Yes, I have seen it", I said. "Beneath the stones, it's lying under the stones." They passed the spear on to me and then I went down.

When I went down and shoot at it, it wriggled strongly. It was hazy and wriggled, so I thought I had shot it already. But the next moment I saw it slip away. And I searched again, and searched, and searched. "Oh, it slipped away", I said. I searched for it, and searched for it but there was nothing. I thought it had gone to another place and so I searched for it in other places but did not find it. When I came back to the original place, I noticed it was lying upside down. This time I shot more focused and quickly, the spear went in directly and pierced the fish. Then I held it with the top of the spear and finally took it out.

I took the fish out from the river and put it on the land. As it was lying there, we sat down. After having

mungan: "Ton kede adep kelanup ko? Wip bet mondokbanup nea?", enggan go, "Ah, okuni balin. Wene kumun kane wenenup a, kip bet nenggip a bet, ne bet mo kadime yo", enggon. Enggon gole, "Eyuk." Kido ton mo kane, wene ambulok, ambulok ambonogolup ko, ambulok bet ayetmup. Ambulok bet ayetmogulup ko, kolo kane ambip munup. Ambip bet mene nengganup. Nengganupket, nengge wane, ye bet mo. Ye bet mo, kolongge, bagi kele konupten. Okunupten o.

warmed up a little more in the sun, I turned to brother Kosmas: "How can we do with the fish? Shall we split it down the middle?" – "Oh, not like that. Let's bring it as a whole and when you have cooked it, then you give (some of it) to me", he said. I agreed. We took the fish in one piece and went to find a rib of a palm tree, in which we wrapped it. Wrapped in this rib, then we brought it back home. At home we cooked it and then we shared it. We did like that.

G Shooting a cassowary

Introduction

Shooting a cassowary is a narrative lasting roughly 9 minutes. It was recorded by Alexander Zahrer on August 6th 2019, in video format.¹ It was recorded in the same session as *Diving for fish* (cf. Chapter F) and therefore in the same setting. The story teller is Galus Kolop, and the recording took place in the house of Lukas Autet in Upyetetko.

Summary & background

This is a hunting story. The narrator and his friends, Lukas and Agus, went to the forest near the Oga River to search for Nik fruits. They split up, and the narrator shot a cassowary, took a feather, and played a prank on Lukas by pretending he had found a dead woman. After revealing the joke, Lukas and Agus retrieved the cassowary, kept it fresh in the river, and resumed searching for fruits. Finding few, they butchered the bird, shared the meat, and cooked a meal by the riverside. After eating, they returned to the village.

Parallel text

Eyuk, edo ta Nik yop bat. Nik yop bat wenem engge kemup. Amben ambonem engge kemen wunup uyot, tekmane keman.

Yes, this is about when we were looking for Nik fruits. I want to tell about what happened when we wanted to find some of them.

Eyuk, Nik yop bat wunup. Ne en, ambo Lukas an, Agus an okune ambip hutan wunup. Tut wani, Oga. Wenonup ko, wene wene, kim wunupten. Kim wune

Okay, so we went for Nik fruits. Brother Lukas, Agus, and myself, we were walking to the forest house. The forest down at the Oga River. We went

on until we arrived at the road leading to the river. We took that road and made plans. "One man shall go this way and the other shall go that way", we decided. – "Yes, you go that way", I said. "I go that way." Thus I went on. Walking ahead, I suddenly recognized some movements over there in the bushes. So I pumped air in my gun and approached the spot. As I went uphill, I saw something was shaking. I thought maybe the other guy passed there. But I as looked, I recognized that it was not the other man. A cassowary had passed just here. So I sat down there quietly and took off my boots. I had my long boots with me. So now I took them off and looked for a tree. At which tree could I hide?

Walking and looking, I noticed a suitable tree. I stood at that tree and tried to spot the cassowary. Where did it go? Oh, it was standing up there. It was standing up there, so I kept quiet. And I shot directly. I shot at it but I thought the bullet did not hit it. "Where will it go?", I thought and watched. I held on to the tree, so I could climb it just in case. If the bullet hit it, it would think: "Where is the human who shot at me?" and it would come after me.

I was standing there and watched, but the cassowary made no sign of running away. I was watching and suddenly the little trees over there were also rustling. They were rustling so,

lun?" Kelegadin go, "Eih!", wenekane wombenu, wani belewanggaun. Belewangganu wene kolun, "Eih!" Kodolok edawo, wene nong kibikap tem wom telenuden. Yem kawene anggado teman go, "Eih, kodolok odo, nong ambodom tem. Nong ambodom okune wom telenuden." Telenuden go, "Ah, edo taun", enggan. Ta ano yop ko mim aip badanggan, badanggan. Taun kole, "Eyuk, wani ma anggembele". Ta ambo Lukas aip winin. Yi alop aip, ambon winin. Ambon winin ga, wene teman go, ambo Lukas ko ye go, men kodop a, oga wani komba engge kemoden. Komba engge kemoden go, ne go niyap kimi go mim kaneni, kodolok ege telenaden, topi dem. Wene yem alin go wani go, men kodop ko, wala engge kemoden gole, wene kikmonggan gi. "Ah enggon o! Boman weneni go wene, kon wanam aip a tae anggun ko, bulunggaden o", enggan. "Nik yop ambon bomonu tanuden non o", enggan. "Ah mok ah", enggon. "Aih, yanam o", enggan. "Hey! What was that?" I was watching and then I realized that the cassowary had fallen over was wriggling on the ground. It was wriggling and then stopped. It's head stuck in some roots of rattans. I went up there quietly and looked at it: "Oh, the head is all in rattan. It has put its head in the bottom of the rattan. It must be dead." And again I shot one bullet at it. It was dead, and I said: "Yes, you stay down there!" Then I went to brother Lukas. There were two (guys), I went to find them. I was looking for them and when I found brother Lukas, he was in the middle of setting a fishnet in the Oga River. He was trying to set it there and before going there, I put a feather on my head which I had taken from the dead cassowary. I came closer and stood still while he was setting the fishnet. I wanted to fool him. "Oh, friend! On my way I met an old woman who was lying there dead", I said. "Maybe she died while looking for Nik fruits." – "Oh, come on", he responded in disbelief. – "It's true", I said. – "You are lying!" – "No, I am not!", I insisted. "She was looking for Nik fruits and now she is dead." – "Who is it?", he asked. – "I do not know. I did not see the face well. Let's go and check", I said. – "Oh, we'll walk right into trouble. Come on, couldn't you have died earlier?", he said.

Enggene, ta men kodop bamenggen wonone, "Ah! Okune ma kolongge yo", enggan. "Okune wani angge bolok go, ine ka, one ka ombet mene kanem", enggan. "Ah okunanup balin. Edo ta towok kampung wini yeman kole, bamengga wa", enggon. "Ah, okune ma kolongge ya", enggan. Mok alambon keman ombet, "Ah. Mok ma tinggan enggain ode ka" enggon. "Eyuk o", enggan. "Niyap a, ain", enggan go, "Aih. Bayang eyuk, ah odep kole kadukma banem", enggon. Nik yop wonggo ambon mo amboden ogo, "ta banem", enggup. Ambo go kamonon e, ambo Lukas ko kamonon e, ta kadukma Agus wene yonggaup. Yonggaup e monon e, ta ye kikmonggem engge yeman. Okunup: "Wene, wene niyap anggun o." Ne go angga adep towanan. Yi alop ko okune niyap anggun wadi okune winip. Ne go kamon adep angga towinin, kadukma mopnok yeman. Wene wene wene, "ih!" binbulut embet temip. "Ih, edo medep binbulut an?" Wani go mopne-mopne kemip. "Ah", temip ko, "ah", niyap aip anggun, "ah". "Ah, mok edo kedep medep a, medep bet ambinggaun o", engge ga, niyap ege anggun ge. Niyap ko kawut kadukma bet kane kadinon. Kane kadinone, mene ok ani. Oga wani kane kamonupten. Kane kamone, nong yenengge kombup e angge bolon e, ta tebe Nik yop ambonggan bomaup. Wene bit ma ambonwale ta wene ok yane ta bit ma. Kido ok yane ta bit ma ambonwalup ko, nowan-nowan koyap-koyap mo okune bup. "Odep kole kolo wenem" enggup. Ta kolo munup.

After this talk, he began to untie the fishing net. "Just leave it like that", I said. "Just leave it. We'll come to take it tomorrow or the day after tomorrow." – "No, we cannot do that. We need to bring the news to the village, so let me untie it", he said. – "Ah, just leave it like that", I said. I was laughing and from that Lukas recognized the hoax. He said: "It must be meat." – "Yes, it is", I acknowledged. "It was a cassowary and I shot it." – "Oh yes, if so, let's call the other guy", he said. The other guy was looking for Nik fruit over there, we decided to call him. Brother Lukas came up from the river and we called for Agus. We called him to come and we wanted to fool him too. Here is how we did it. "The cassowary is lying in that direction." I had passed quite a distance. The two of them should go up to where the cassowary was lying. I took a detour in order to surprise the other guy. They went on until they saw tracks. "Oh, what track is this?" They were surprised. Then they saw, there was a cassowary lying there! "Oh, maybe this is what made the tracks", they thought but the cassowary was just lying there. The other guy quickly took the cassowary on his shoulders. He carried it and came to the river. We put it in the Oga River. First, we tied it with a rope and then put it down and left it lying there. Then we went away to find some Nik fruits. We looked for it at the crest and crossed a river, and crossed it again at

Kolo mene niyap ogo kanenup ko kimi badaup. Kimi badaup ko, niyap ko, yitnoden gole, tinggi kok, "ah!" Tinggi bet badaup kole tinggi kok. Okune ambanap kimi badae nowanegolupket, kawut ok kebet oya bet bunggaen, ambo Lukas bet. Bungge be yalone ko, be kadukma kele, kadukma kele, ko. Yeka kadukma yom mo anup. Anengge wanegolup ket ko kido ok ane, ok ane wanupten go kawut kido kombe munup, munupten. Mene mene kim talep, kim talep nanggenup

another crest. We crossed the river to find them on another crest. But there was almost nothing, we only got a few. "If it's like that, let's go back", we said. And we came back.

We came back to the cassowary and took out its feathers. We pulled them all out but the cassowary had become cold and our hands were aching. We pulled out the feathers with our bare hands and it was very painful. Somehow we managed to pull out all the feathers this way and then, still at the river side, brother Lukas sliced it. He sliced it, put down the slices and took them to the other man. He took the slices of meat and put some of them in the bag of the other guy and some into my bag. Then we quickly went up to the high land and while walking we became hungry, so brother Lukas said: "Let's cook some sago to eat!" We agreed and went around collecting fire wood and some dried palm leaves and then we made a fire. The fire flared up and we baked the sago. When it was done we took it out and ate a lot.

"Oh, we cannot eat sago only, come on! There is meat. Let's roast a small piece!" – He took and roasted it. While he roasted it, the other man said: "Oh, It's harmful to me. I will not eat it." And so he did not eat. Only brother Lukas and me ate from it. After we ate a lot, we drank water and finally we moved on. We came to the big road, we arrived at the big road

G Shooting a cassowary

*ko, kim talep nangganup, kawut kam-
pung munup o. Okunupten.*

and then we went on to the village
quickly. We did like that.

H A fishing trip

Introduction

A fishing trip is a narrative lasting roughly 25 minutes. It is the longest text of this collection. It was recorded by Alexander Zahrer on August 6th 2019, in video format.¹ The story teller is Patrisius Enip, and the recording took place in the house of Lukas Autet in Upyetetko.

Summary & background

This story recounts a fishing trip to the Kowo river by the narrator and his brother Bruno Kakut. After preparing supplies and informing their parents, they were advised to stay together. They spent five days at Widi River, then moved upstream to Udaben, and later to the Kilok Kone estuary, catching fish and shrimp along the way. After five days at Kilok Kone, they returned to Widi River with their catch, which their mothers distributed among family and neighbors. The next day, they returned to the village, transporting peanuts for the family.

This story highlights the values of family, cooperation, and sharing in their community.

This is a story about going to Kowo river with brother Bruno Kakut. As I came back from school one day, I sat down and asked him: “Hey brother. How about going to Kowo River?” Bruno agreed and I explained the plan: “Brother, we will go. Going to Kowo River, we can stay at Widi River. Next we will stay in Udeben. And from

there, we go to the estuary of the Kilok Kone River. We stay there a little while and from there we take the same route in the opposite direction. We stay for five days and come down to Udeben again for five days. After five more nights, we come to Widi River and spend only one night there and then we will go home to the village” I laid it all out to him and my brother agreed: “Brother, we will do like that.”

So we prepared the trip and first packed the tobacco. From Lampion we took three packs. From Surya we took five packs. And then the coconuts. We took five of them. Then salt, MSG, a small cooking pot, we took things like that.² Then we told our parents. “Parents, we want to go to Kowo River”, we said. “And we will go from Widi River to the estuary of Kilok Kone River. From the estuary of Kilok Kone River, we go on like that and come back to Widi River. Eventually we will come back.” We said that to our parents. “Yes, sons, you can travel like that, but there is one prohibition: Do not separate! Stay together.” That was our parents advice as we took off.

First, we went to the mouth of Widi River and stayed there for five nights. Then we packed our things in the

² *Lampion* and *Surya* are popular brands for cigarettes in Indonesia. Furthermore, *vetsin* ‘MSG, i.e. Monosodium glutamate.’

early morning and rowed our boat up-
stream to Udeben. And we stayed in
Udeben. But why did we go to Kowo
River in the first place? It was for fish-
ing. We needed to get fish to eat. So
we ate the fish, those from Widi River.
We came to stay in Udeben and we
fished and we also ate them all there.
We ate all we could catch for five
days, then we went upstream to the
estuary of Kilok Kone. As we arrived
there, we tied the canoe safely and I
said: “Brother! It is difficult catching
the little shrimps here, so we’ll try
it with shrimp traps. We need three
traps. We make them and then go to
put one into the water down there,
put one into the water up there, and
put the third one into the water in the
middle. We just use the traps, think
about that. It is a stony place, this is a
good spot.” Then he went to cut some
sago leaves and brought them, so that
I could make the traps. As I finished
the first one, I showed it to him: “You
too can make one like this.” As I was
teaching him, he tried to make one:
“Brother, like this?” – “Yes, you go
on like that, it’s like the one I made
here.” But he struggled to make even
one. He struggled because it was new
for him, so I set one first and he set
one after that. We finished preparing
and then we took some termites. We
chopped them quickly and cut some
leaves around there. We took them
into the shrimp trap, we split the ter-
mites and put them into the shrimp
trap. Then we put some stones into it

Bomup e adon, "Ah, edo wunipten" engge, ta wene kane kane, ta wene kane kane, wene ma nanup ka, "Aih wunipten!" Beo wane ta wene ombet ma. Ta wene ombet ma, nano, bene, kane belanga dem. Belanga dem mo. Ta wene ma adi, ombet ma. "Aih", midin ko kadap an.

and put the traps into the water.

When we walked around and we saw that some small shrimps must have gone into a trap. That's why we went to take the traps out. As we took a big one out, we saw that shrimps were inside. We took them all and went to another trap. At the other trap, we pulled it out, took the shrimps and put them in a cooking pot. Directly into the cooking pot. Then we went on to another trap. There were also many little shrimps.

There were the fishing hooks also. So as for the fishing lines, it was like that: I had one fishing line and my brother had two fishing lines. Since we only had long fishing lines, we just cast them and fished. And indeed, we caught some fish. You must know: they call me "the fishhook" because that is my thing. We caught those fish and bound them with a string and then put them in various places. We brought a big fish here, bound one over there, bound another one over there, bound them with nylon or with rattan, we just put them everywhere. This way we could later take one out for lunch or for dinner. That's how we keep the fish fresh.

This all happened on the first day. We still had four more days and five nights. On the fifth day, we prepared to leave. When a fish is almost dead, it is usually taken, split and stored.

bimo. Ma tien mo odo okune tiogulup, wene wadi bet tiup ka, wadi tiup ombet, "Eih ton odo, wene timbalanup, wene ta, Udeben timbalanup kanggon, edo aninggo tin kot wene mene kemanup balin gole." But some were still alive at the end of our stay. My brother said: "Oh, about those fish! We will go to Udeben. It is not near enough to go and come back regularly for the fish." When we were just about to go, I said: "Brother! Actually, these fish are enough! Let's go directly from here back to Widi River instead of staying in Udeben. We go to Widi River and we take these fish to our parent's village first", I said. – And he said: "Well brother, it's up to you. I ate a lot of the fish we chose to eat and I also have a headache. I feel queasy and almost vomited, so let us take the fish to our parents first." So we packed out things the next day and rowed the canoe back. From Widi River, we wanted to go to the village. Approaching the estuary of Inggo River, we already saw: "Oh, there is smoke." Since there was smoke, he thought: "Brother, maybe the parents came to the river." – "Yes, it must be them", I answered. We went on like that and finally came to the mouth of Widi River. As we arrived, we tied the rope of the canoe. It was done by me, since I was at the back. The other guy got up and was standing, I also stood up and the canoe almost flipped over. The canoe rocked, so I went off first. When I went off and hit the canoe with a paddle, the parents heard it up there at the house. They heard it and his mother came down. She thought this might be the children and came down to have a look. That woman came down and

ko, eih, ye ena ombet kido munun. "Aih, tana non", engganu. Adan bet kido mene temun, ta ena ma bet, mene temun go, "Eih! Eyuk ah, tana an o! Tana kowo minip ege, Kilok Kone kaba ye ka an o", enggun. saw us: "It's the children who went to Kowo River and to the Kilok Kone estuary", she said. "Oh! Yes. Madam, we have brought our catch. Please go tell the other women up there, then come down to get it", he said. They agreed and did as he said. The woman up there called another woman and they both came back. It was Mrs. Monika and my mother Tekla. So they came and arranged everything. They saw that the canoe was full of fish. There was a sack full of fish. "Oh! Son, that is enough", they said and took some of them.

We threw those fish that were still alive back into the river. We had already prepared strings, so we threw them in the river. They stayed exactly where we put them. Then we took the cloved fish and went home where they arranged everything. "Oh! We cannot eat the fish all by ourselves, they are too many. But all our friends are at work. We are here at Widi River and we should share the fish with out friends", they said. But we replied: "Oh, mom! We came here just for a short moment, and we want to go back upstream. We were going to Udeben but we saw these fish here when we were passing, so we did not go there directly. We wanted to go to the village, then we came here to

Widi River. So you have to eat the fish now, we want to go back immediately”, we said. “You mean these fish?”, they asked. – “Oh! That is what we brought. We want to go back.” – “But what about your food?” – “For now we have food, we can eat sago”, we said and added: “If you have rice, maybe, please give us some of it.” – “There is just a little river. But then again it is only two of you, so ... okay. You can take one bag of rice”, they said and they gave it to us. “Is that all? What about tobacco? Do you have tobacco, salt and vetsin?” – “Yes, we still have some.”

We brought the coconuts back without using them, so they told us to leave them at Widi River. But we just left two of them and we took three with us. We took them to Udeben and stayed there. Additionally, we brought the shrimp traps. We had told the parents: “We will go for five nights.” So we went there and stayed there to go fishing from morning until evening when it would become dark. When it was not raining, we would go down to the river and stay there. The fish would get caught in traps when they get the baits and then we would start to tie new ones. We kept on doing that until the day breaks.

As for the fish, it is usually organised in a certain way. The big ones are separated from the others. They are tied on strings. So we tied two middle

sized fish at one string, three middle sized fish at another string, and so on. We tied each and every one. As for the food, there was enough of it. So nothing to worry about, and tobacco as well. There was only the two of us. We had nothing else to do, our business was catching fish, that is all. As for firewood, it was in the house where we were staying. It belonged to a man from Waewok. So no problem, the firewood was still there. There was nothing to worry about. We stayed there for five nights and when it was time, then we took the fish. Then one time we noticed: "Oh, we brought this coconut without eating it, taking it all the way with us. We could split one", we said. There was a coconut grater in the house. This forest house as it happens had a coconut grater. So we split the coconut, took the parts and grated it. Then we squeezed it and we did all that. The Alok fish we had caught was very big. We used to fish for that before but we never caught a fish of that kind. So now we had this very big fish. "Brother, we have coconut milk", he said. "This stuff is great to cook with." So that's what we did. We ate so much that we spent the whole night only eating until the day broke.

The next day we went to take the fishing lines, then we came back to the house and packed our things. Finally, we took off, untied the canoe and went to the place where we had put the fish. We untied the fish and

put them in the canoe, then moved further to untie some more fish and put them in the canoe. We had to do this because the fish were put indifferent places. Not only in one place. As we finished this, we quickly rowed downstream, heading to our place. We went down the Widi River, where we had told our parents to wait. We had made an appointment with them. “They should have stayed there”, we hoped and soon we should see that we were right. They were still there, we saw the smoke already. So we rowed down the Widi River and tied the rope of the canoe. This time brother Kakut knocked at the side of the canoe. As he did it, mother knew: “Oh, that must be the children.” They came to stand on the top of a hill looking down. And they spotted us. “Yes, the children are here”, she said. And we said: “Of course, mother, we came. We had an appointment and we wouldn’t miss it! That’s enough, our trip is done. That’s why we came down here.” And then we said: “It is as usual. Please come and take the fish first.” Then we came back up to house, while the women organised everything. They collected the fish and brought them up. Some of the fish were brought to eat, but others were tied and put in the river. They said: “We cannot eat all ourselves. The older sister and the brother-in-law live next door. Also, our grandchild lives here. Grandchild Omnumun, that is our grandchild.”

Okune. Kedo mim kale, mim kale, okune, ok Widi katma oya bet alip, monggop tana. Ah, kanggon okune, wene oya. Okune, enaa bet numbune kemip e. Nup ko, nup kat balin. Ani yeman ombet mo on. And that's just how it is. They live at Widi River and share everything with their relatives. Oh, it's just how it is, over there. The women are the ones who share. As for us, we do not know how to behave properly. We only know how to eat, that's it. The man would go out for food, bring it and eat it. But the parents used to say like this: "Son, whatever things there are, be it meat or vegetables, whatever things there are. When you have plenty of it, it must be shared with friends. It is also for the friends, so we may not eat all by ourselves." So one must take it like that to friends, relatives, brother-in-laws, and to uncles and cousins. "Always share like that", the older people used to say. So we could not hesitate: "Shall we bring them the fish or not?" Because they were family. "Just do it!" That's what they said and they acted accordingly and after we finished eating, we said: "Mom! For us, our time here is over. So can we go to the village?" – "No, not today. We run some errands tomorrow, you have to carry peanuts then we will go to the village", they said. So we agreed and that's what we did.

We stayed there for the night and the next day we packed everything. As for the peanuts, they just entrusted me with them. The brother was younger than me, so he could not take them. He just carried some stones for his slingshot. That's how we would walk

okunupten a odo, taman yom, "Aih, ambo! Adon kudok koloden ogo bo-manup nea?", enggaen go, okunupten. Oyamin mo on.

back to the village. I carried the peanuts on my shoulders and my younger brother decided the moment of our departure. "Oh brother! This is a good time, can we go?" So we went off.

I The Benem rat

Introduction

Tinggal Benem is a narrative lasting roughly 4 minutes. It was recorded by Alexander Zahrer on August 7th 2019, in video format.¹ The story teller is Yakobus Wonam, and the recording took place in the house of Lukas Autet in Upyetetko.

Summary & background

This story recounts an adventure where the narrator, their mother, Yamuk, and friends journeyed to the Wolok River estuary. As they approached, the mother found a Benem rat's nest and called for help. The narrator and Yamuk rushed to assist, but in the confusion, the narrator accidentally grabbed his mother's thumb, mistaking it for the rat's snout, and tried to break it. After the painful misunderstanding was clarified, the incident ended humorously.

we just went on until we were almost at the Wolok estuary. Mom said, “Sons, you keep going all along the road. I’ll go to check the places where the Benem rats usually hide. I want to check that first.” After she said that, I, brother Yamuk, and our friends Abraham, Agus, and Galus went on as we were told. Galus was a little boy at that time. We just kept on walking, when suddenly mom called. She was calling my name, so I replied, “What’s the matter?” – “Come here! Let us kill a Benem rat”, she replied. After she said that, brother Yamuk and I were running to her. We went to the place where mother was trying to hold and kill the rat and there we met her.

When we went to meet her there, we saw that she was right. The rat was in the aerial root of a tree. It had made a nest and stayed there. It stayed like that, so mom put her hand in the aerial root from one side then she reached in from the other side of the aerial root. Like that she had tried to catch and kill it but it was too hard, so she called for us. As we arrived, mother said: “You son, put in your hand from one side of the aerial root. And Yamuk needs to put in his hand from the other side of the aerial root.” She said that and so we did. I came from one side of the big aerial root, put in my hand and reached to mother’s thumb. So I held mother’s thumb and tried to break it. But mother wanted to pull out her

Benem mudu kono ninaden engge, ena ye tinggi anggo odo nine omba engge kemodin. Ta ena odo yu tinggi kana ye engge kemodun. Okuna engge kemodun go, kedep a, tinggan Benem bet a nukmo kemoden engge ena ye tinggi odo, ena ye tinggi anggo odo kenambun okuneni, nineni, omba ye engge belewadin go, ena odo yu tinggi bike kana engge belewaun go welen kolun go kumunggun: "Tana wangga, tana ne tinggi wangga, wangga kanema bet nine alabeden ga?", enggun. Enggun go, ne bet kumungan: "Ena, ne bet an non e", enggan. Enggan go, kededanun: "Wangga okune ma nine teme", enggun.

Ninan. Ta tinggi kedep a tinggan mudu konon engge ya nine omba engge belewadin odo. "Emba, odo ne tinggi nine omba engge belewadep a", enggaun, "Oh!". Okunupten.

hand. I thought I was holding the snout of the rat, while I actually was trying to break mother's thumb. And mother kept trying to pull her hand out. As she struggled to pull it out, I thought the rat was moving. So I held on to mother's thumb strongly, I held it and tried to break it. And mother still tried to pull her hand out but it was too difficult. She said: "Children, that's my hand there, who is holding on to it?" When she said that, I answered: "Mom, maybe it is me." – Then she told me: "Just try to grab it again."

I grabbed it and thought the finger was the snout of the rat, so I tried to break it. "Oh son, you are trying to break my hand", she said, "Ouch!" We did like that.

J The Muying rat

Introduction

Tinggalan Muying is a narrative lasting roughly 4 minutes. It was recorded by Alexander Zahrer on August 7th 2019, in video format.¹ The story teller is Yakobus Wonam, and the recording took place in the house of Lukas Autet in Upyetetko.

Summary & background

This story describes an experience between the narrator and his brother Lukas at the Wolok estuary. While Lukas harvested peanuts, the narrator played around, occasionally throwing sand at Lukas. During one playful moment, the narrator discovered a Muying rat's nest among the peanut plants. Encouraged by Lukas, he reached into the nest but was bitten by the rat, causing his hand to bleed. While Lukas found it amusing, the narrator returned home crying.

This one is about brother Lukas and me. It's a story about a Muying rat that made a nest to stay in and when I caught it, it bit my hand.

We stayed at the Wolok estuary and brother Lukas planted his peanuts. It was a very big patch of peanuts that he planted. He had planted them and waited until they were ready. "The

peanuts are becoming old already", he said, so he harvested them.

Our father also planted his own peanuts. He had a very big peanut garden. It was like that and brother Lukas harvested his peanuts in round patches, like islands, and left them. He made some further "islands" and left them. He always did like that until he would finish harvesting. He would harvest them by going around pulling them out and forming patches like islands. He would go on until the last one. He always left one of these "islands".

I used to come to play with him while he was harvesting. I came to the place and took some clumps of sand from the ground and threw them to hit him. He would try to hit me back but I usually ran away and then he would sit down again calmly and harvest his peanuts. And again I would come to throw something and hit him. The two of us used to play like that.

One day we were playing like that and I came closer to my brother. "Brother, please don't be angry at me." I thought I was disturbing him and when I came closer to him, I saw that there was a rat's nest inside the soil where he harvested peanuts and made these little "islands". The nest of a Muying rat. I went on, went closer and checked it well, "Oh, it is a rat's nest! This Muying rat's nest is new! There must

tinggan yanop an”, engge yem opko-goli, ambo bane kumunggan. “Ambo, eyom edo tinggan yanop a non o”, enggan. Enggan go, “Ah, wani ningge teme yo”, enggon. be a rat in here”. I thought like that and I called my brother and told him. “Brother, maybe there is a rat in here”, I said. When I said that, he responded: “Try and catch it!” I went closer and hesitated if I should catch it or not. While I was still hesitating, I tried to touch it with my foot. “Oh, I cannot go on like that, there must be a rat”, and then I tried it with my hand. It was true, there was a Muying rat in it. A Muying rat and even its offspring stayed in there. I held the nest of the rat and then it bit my hand, so that I bled strongly and brother Lukas laughed at me. He laughed at me and I just went back home crying. We did like that.

Children of the sago

This collection of ten texts offers a unique glimpse into the language and culture of the Muyu, a Papuan people living in the heart of New Guinea. It features narratives from six storytellers, all of which have been transcribed, translated, and linguistically annotated.

The presentation follows a two-part structure: first, a parallel-text format with Muyu and English arranged in columns; second, an interlinearized version for detailed linguistic analysis. The texts revolve around two central themes—myths of origin and accounts of encounters with animals.

A brief introduction to the Muyu language and its speakers precedes the texts, providing essential context for readers from both linguistic and anthropological backgrounds.
